PRESS RELEASE  
APRIL 2022

## THE BRAND NEW ALL-IN-ONE RECYCLING ABSORBENT SYSTEM for organised, safe and clean workshops!

Toucan  Pack®

The Toucan Pack is a new cleaning concept which advantageously replaces **traditional absorbents** (such as sawdust and granules) which are used to deal with spillages on a daily basis. The Toucan Pack is a **true innovative product**, very efficient and which avoids the common absorbent piles, manipulations and risks related to slippery floors.

The Toucan Pack is an all-in-one station which **stores, distributes and recycles its natural absorbent: Fibercan+**. Its natural formula based on ligno-cellulosic fibers will instantly encapsulate liquids from the contact point. Great absorption without any greasy film.

Its usage is very simple. The user takes some absorbent from the storage drawer to spread it on the spill and put everything back on the sifter placed on top of the machine. At last, he pushes the handle to **separate the clean absorbent** - which goes back in the bottom of the storage drawer to be used again - **from the soiled absorbent** - which falls back into the waste collection tank. Doing so, **the product is being used at 100%** of its capacity. **Consumptions and absorbent waste are being divided by 8.**

This product has been designed to be **totally user-friendly** : close at hand tools, clever sifting system and an eased maintenance. It is the necessary and economical tool for all the automotive professionals who want to work in clean, safe and organised workshops.
