

Gutter protection film

This film will offer a solution to prevent the formation of residue from fertilisers on the gutters. It also will prevent unwanted root growth and reduces the risk of transmission of viruses and diseases. Another benefit of installing the film is, that it extends the lifespan of the gutters by reducing the degradation of the coating caused by fertilisers.

Black/white, to prevent algae growth underneath the film.

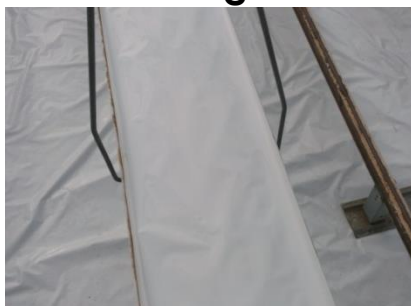

For 1 year use, you can easily and fastly clean the gutters during crop exchange at the end of the season.

Easily installation by using the specially developed rewinding socket and associated trolley.

The gutters must be 100% dry, prior to the installation of the film.

Width sizes of 20 and 23,5 cm with 2 flaps of 10 and 11,75 cm, respectively.

Standard rolllength of 500 meters per roll.
