

# NUTEAK XT

THE ULTIMATE BURMESE TEAK REPLACEMENT

## INTRODUCING NUTEAK XT

The Ultimate Yacht Decking™

**NUTEAK XT** is the only synthetic teak in the world designed to look, install, cut, and sand like Burmese teak. Key improvements on the teak installation process includes eliminating the need for caulking and the resulting drying times and extra sanding. This has been replaced with ICA Group's Seallock profile and PVC welding for faster fabrication and a more durable seal.

### NUTEAK XT FEATURES

**TOP WELDING** - The Seallock profile allows for easy top welding with guided lines, no bottom welding is required.

**TEAK LIKE INSTALLATION** - designed to be familiar to craftsmen that work with Burmese Teak.

**SEALLOCK PROFILE** - The profile allows craftsmen to cut the deck to shape before installing it piece by piece.

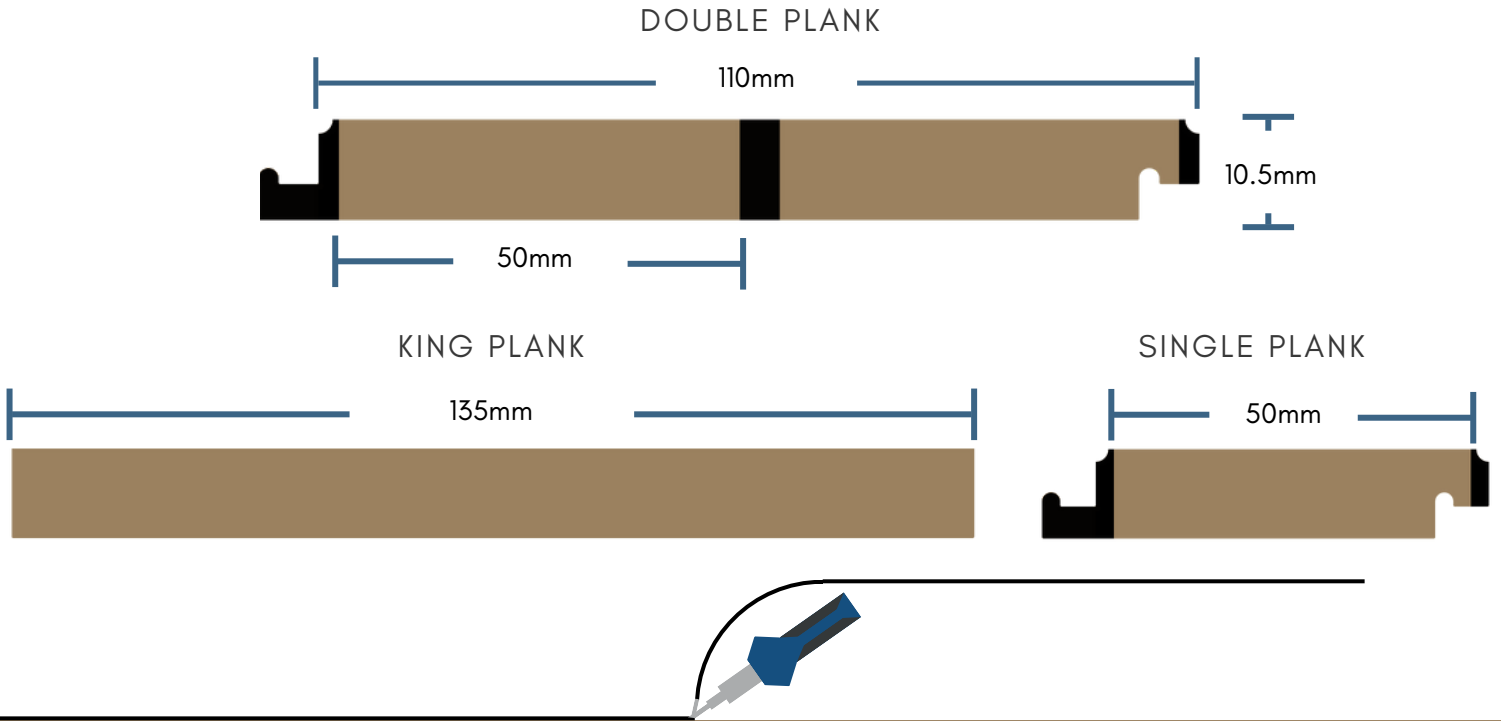

**THICKNESS** - Equal thickness to solid Burmese teak decking, creating an unmistakable luxury yacht deck aesthetic.

Depending on the size of the application Nuteak XT can be pre-fabricated and installed as a single panel (hatch lids and steps) or pre-cut to shape and installed and welded piece by piece.

### ALONG WITH THE UPGRADES NUTEAK XT RETAINS THE SAME GREAT PERFORMANCE

- **100% NON-POROUS** - Nuteak is not foamed or nano foamed, it is naturally anti fungal and will not absorb dirt.
- **EASY MAINTENANCE** - Regular cleaning after boat use and 1-2 power washes per year will keep your Nuteak deck looking brand new.
- **FULLY UV STABILISED** - Nuteak is made to withstand harsh sun and salty conditions.
- **SAFETY** - Nuteak is non-slip wet or dry for safety under any conditions.
- **DURABILITY** - Nuteak will not split, peel, crack or dry out. Dents and damage can easily be removed or repaired.
- **AESTHETIC** - Nuteak is the most realistic synthetic option for a traditional natural teak look.
- **COST EFFECTIVE** - Nuteak costs less than teak and lasts longer with less hours spent on maintenance.
- **DESIGN AVAILABILITY** - All possibilities are still available including bull nose, special cut pieces and custom designs.
- **SPECIAL PROJECTS** - Custom lengths available on request. Custom colors are available with a minimum order quantity.
- **MADE IN CANADA** - Duty free to many countries around the world and globally available through our distributors.
- **20 YEAR LIMITED WARRANTY** - The best in the industry.

## THE MOST REALISTIC SYNTHETIC TEAK AVAILABLE

The resulting rigidity from a thicker plank means that **Nuteak XT** can be cut and shaped with the same carpentry tools used in the construction of a Burmese teak deck. The Seallock profile with PVC top welding is both stronger and faster than the traditional caulk and sand method. Any necessary training can be provided by ICA Group.
