

HALOFOG 700

COMPLETELY AUTOMATED DISINFECTION

Complete cart and crate disinfection in two minutes

The **Halofog 700**, also called the **Cart Disinfection Station**, is a **completely automated disinfection lock chamber which prevents cross-contamination on picking carts**. By disinfecting the picking carts with dry fog all harmful viruses, bacteria and fungi are eliminated before the carts go back into the greenhouse. In merely two minutes the carts and crate on the cart are completely disinfected and safe to re-enter the greenhouse. Make sure a small problem in one place doesn't become a big problem for the whole greenhouse. We build the system completely tailored to your needs.

Depending on the options, your product may look different from the image.

FOGGING & HYGIENE

HALOFOG 700
