In made in Italy Maestrini nasce nel 1964.
In quegli anni la Maestrini s.r.l. è una piccola azienda artigianale ai piedi del Monte Rosa che produce raccordi filettati in ottone per il solo mercato piemontese.
Giulio Maestrini, il fondatore, fin da subito ha per la sua azienda un'idea e un obiettivo precisi: "il miglior raccordo sul mercato, fornito nel più breve tempo possibile."
Proprio l'alta qualità del prodotto insieme ai giusti investimenti fanno sì che, già all'inizio degli anni '80, l'azienda possa avvalersi di una capillare rete vendita presente su tutto il territorio nazionale.
E di questo periodo l'acquisto delle prime macchine transfert e lo spostamento della produzione da un piccolo stabilimento di soli 150 mq ad una sede di 500 mq.
Gli anni '80 sono anche quelli dell'apertura all'industria del diporto, con la produzione di raccordi destinati alla nautica.
Con l'inserimento nell'organigramma dei figli di Giulio, Ivan e Manuela, all'inizio degli anni '90 l'azienda riceve una nuova spinta. Questi sono gli anni della svolta.
Gli investimenti interessano sia la crescita della produzione con l'acquisto di macchinari automatici dalla forte cadenza produttiva e torni a controllo numerico, sia lo sviluppo del marketing aziendale che consente alla Maestrini s.r.l. di aprirsi anche al mercato estero.
Nell'ultimo decennio l'azienda ha continuato la sua sana espansione.
Oggi la Maestrini s.r.l., complice la forte propensione all'investimento, si sviluppa su una superficie di 7.000 mq (di cui 3.500 ricoperti con pannelli fotovoltaici), conta più di 20 dipendenti ed esporta più del 50% della produzione.
La crescita è costante, ma la filosofia dell'azienda rimane quella concepita da Giulio Maestrini alla nascita: i prodotti rispettano, oggi come ieri, standard di altissima qualità (l'azienda è certificata ISO 9001), l'alto livello di progettazione e la velocità di produzione consentono che si passi dall'idea al pezzo finito in tempi brevissimi. Fiducia, flessibilità, attenzione alle singole esigenze e aspettative rimangono caratteristiche distintive del rapporto con il cliente.
"Sono i nostri clienti che, continuando a preferirci, ci hanno permesso di fare i giusti investimenti, di continuare a crescere e migliorarci per essere sempre all'altezza delle loro aspettative! A tutti loro pertanto va il nostro grazie più sincero!" - Giulio Maestrini

The Maestrini made in Italy was born in 1964.
In those years, Maestrini s.r.l. is a small artisan company at the Monte Rosa feet, which produces threaded brass fittings only for the market of Piedmont.
Since the beginning, Mr Giulio Maestrini, the founder, has got a precise idea and aim for his company: "The best fitting on the market, supplied in the shortest possible time".
The high quality of the product together with the right investments allow the company to have, at the beginning of the 80s, a capillary dealer network on all the national territory.
In these years, the company purchases the first transfert machines and shifts the production from a small factory of only 150 square meters to a seat of 500 square meters.
In the 80s, the company opens to the pleasure crafts industry and starts producing marine hardware. At the beginning of the 90s, the turn. In the company, alongside of Mr Giulio, there are now his children Ivan and Manuela. The family directs all the efforts towards the growth of the production with the purchase of highly productive automatic machines and CNC lathes and with the development of marketing, reaching the foreign markets. In the last decade, the company has continued its healthy expansion. Today the Maestrini s.r.l., thanks to the strong propensity to investments, occupies a surface of 7000 square meters (of which 3500 are covered with photo-voltaic panels), it counts more than 20 employees and exports more than the 50% of its production. The growth is constant, but the philosophy of the company remains the same conceived by Giulio Maestrini at the origin: the products respect, today as yesterday, a standard of very high quality (the company is certified ISO 9001). The high level of design and the speed of production allow to pass from the idea to the finished piece in very short times. Trust, flexibility, care for every single requirement and expectation are distinctive characteristics of our relation with the customer. "Our customers, going on with preferring us, have allowed us to make the right investments, to grow and improve in order to be always equal to their expectations!
Therefore, we would like to thank all of them sincerely!" - Giulio Maestrini
