Carbon fiber **sailboat steering**

Exit Carbon wheels are suitable for sailing yachts, racing yachts, catamarans, and trimarans: ideal for anyone looking for a more responsive helm and enhanced comfort while, at the same time, increasing safety.

Exit Engineering was the first company to design and manufacture a wheel built in one piece, with no gluing of separate parts, unlike all other brands.

Space age technical exclusivity

Best results in terms of lightness, strength, and consistency.

The exact same wheel we supply to the fastest ocean racers is available for your yacht as well. Our shape seems easy to copy, but our construction is still unmatched.

European Patent 1755869B1

Exit Engineering was the first company to design and manufacture a wheel built in one piece - unlike those of all other brands at the time - without gluing separate parts.

The right hub for any axle

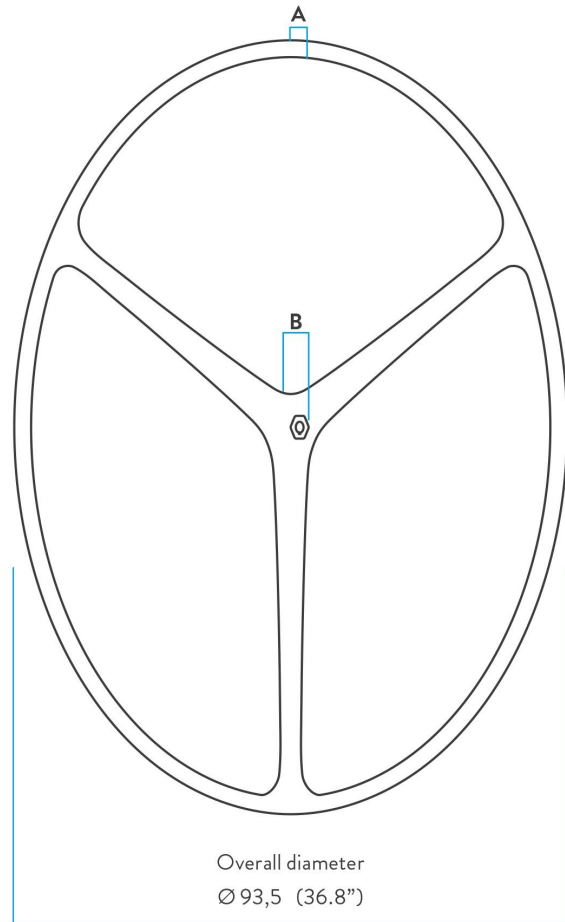

Our four standard hubs are always available and fit most steering wheel axles and we have stainless steel adapters for the 2 most common flange fittings, by Edson and JP3.

Many other brands of steering systems use the same fittings so check the drawings if in doubt.
