

# TEAMO HI-LIFT WITH BACKTOW HARNESS

## 150N Size, 275N Performance

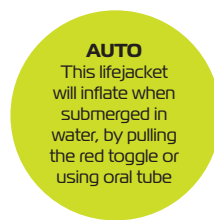

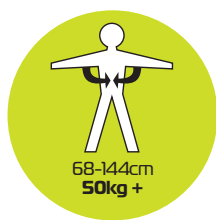

Hi-Lift re-thinks the way users are supported in the water. By re-distributing buoyancy usually wasted above the waterline, TeamO have managed to make a dramatic increase in mouth freeboard. This is the distance between the water's surface and corner of the mouth and is the definitive measurement of lifejacket performance. The new TeamO Hi-Lift floats the users mouth \*60% higher than other market leading brands. Packed with TeamO's BackTow Technology Hi-Lift is a leap forward in consumer safety.

Colourways:

## What is Back Tow?

All conventional harnesses will tow you in a face down position with you legs pushed out behind you forcing your head underwater. With TeamO's patented BackTow Technology, you clip on at the front as normal, but if you fall in the water, you can pull the BackTow handle and be rotated into a face up seated position, keeping airways clear and buying time for recovery. The moveable harness point is also an approved lifting point.
