

PGP presents dispensers, services, and products

For the first time, German occupational skin care manufacturer Peter Greven Physioderm (PGP) is exhibiting at InterClean in Amsterdam together with Dreumex. Dreumex, a Dutch skin cleansing and surface disinfection specialist, was acquired by PGP in August 2025 and integrated into the Peter Greven Group. At booth 11.101, the occupational skin care, hand, and surface hygiene experts will showcase their wide range of dispensers, services, and products, offering the right solution for every application.

Solutions for all areas

"We are thrilled to present our combined product portfolio at InterClean for the first time," said Stephanie Reichenberger, PGP's Head of International Marketing. Through the acquisition of Dreumex last year, PGP continued its growth strategy and strengthened its international focus. The Dutch company has transferred to Peter Greven Physioderm GmbH as a subsidiary but will retain the Dreumex company and brand name. "Our product portfolios complement each other perfectly. Together, we offer solutions for all areas of occupational skin care, hand hygiene, and surface hygiene. Visitors to our InterClean stand will be able to see this for themselves," adds Sanne Jennissen, who is responsible for marketing at Dreumex.

Dispensing systems for optimal dosing

Dispensing systems are an essential component of any hand hygiene and skin care concept. At InterClean, PGP will present its popular Variomat Pro dispensers, which function flawlessly even under heavy use and are impressive for their cost-effectiveness. The touchless Variomat Pro Touchless uses a capacitive sensor that reacts much more precisely than the traditional infrared sensors. It is also certified as "splash-proof" and can be used outdoors and in showers under certain conditions.

The Dreumex One2Clean dispensing system is popular in the automotive, construction, and manufacturing industries. Suitable for skin protection, cleansing, and care products, it can be operated without contact. The automatic dispensing system ensures optimal product dispensing. With this feature, up to 85% of hand cleaner can be saved.

The most comprehensive UV protection program in the industry

Dermal UV protection is a major topic at the stand. PGP offers the industry's most comprehensive UV protection range and has the right solution for all applications. This includes the fragrance-free sunscreen Physio UV 50 PLUS, which provides very high protection even under extreme conditions, such as wetness and heat. The cream is highly waterproof, so it does not need to be reapplied immediately when the user sweats. Another option is Physio UV 50 Lotion. This waterproof skin protection lotion has a sun protection factor of 50, is fragrance-free, and is gentle on the skin. It is quickly absorbed and offers excellent value for money. PGP also offers products for those who prefer sprays, such as the extra waterproof, fragrance-free Physio UV 50 Spray.

Heavy-duty cleansing products

The German innovation leader's extensive product range is evident in its cleaning agents for heavy dirt. PGP has developed a highly effective cleaning agent that is gentle on the skin. It contains patented Active Soft Pearls that work well against stubborn dirt. Made from hydrogenated castor oil, the wax pearls do not work like conventional agents with mechanical abrasion; rather, they bind dirt particles through their lipophilic surface structure. The soft, smooth wax pearls also care for the skin.

Dreumex Expert Wipes are the ideal solution for workplaces without access to water, where cleaning agents cannot be used. The wipes contain a highly effective liquid that removes the toughest dirt, including lubricants, oils, greases, paint, adhesives, ink, and sealants, from hands, tools, and surfaces. Skin compatibility is also a top priority for the wipes. Dreumex Expert Wipes are dermatologically tested and particularly skin-friendly.

Cleaning and disinfection solutions for the food industry

The food industry is a very demanding field. Here, cleaning wipes must meet strict hygiene and safety standards to prevent food contamination. With Dreumex Disinfectant & Cleaning Wipes Blue, PGP offers cleaning wipes for this sensitive area that clean and disinfect surfaces and tools, such as knives, thermometers, tongs, handles, mixers, and cutting machines, simultaneously. This saves time and resources because only one wipe is needed. The wipes are effective against bacteria, yeasts, and enveloped viruses in as little as two minutes, and their texture helps remove dirt. Dreumex Disinfectant & Cleaning Wipes are dermatologically tested and do not contain aggressive chemicals such as bleach, chlorine, alcohol, aldehydes, or VOCs. Additionally, PGP offers skin care products suitable for the food industry that further support hygienic food handling and enable safe coverage of sensitive production areas.

Moving consistently toward a circular economy

Sustainability is a cross-cutting theme that runs through the entire trade fair presentation. Many PGP products have received prestigious certifications, such as the EU Ecolabel. One example is the Ecosan liquid cleaner. These certifications consider not only the ingredients but also the packaging. Therefore, it is very pleasing that two additional containers - the 500-ml and 1-liter hard bottles - have also been certified.

"We are constantly increasing the proportion of recycled or recyclable materials in our packaging. By the end of 2026, a significant proportion of our bottles will be made from recycled materials, which will promote the circular economy," explains Stephanie Reichenberger. So, the packaging of Heavy Duty Wipes is already made from PCR material. And Expert Wipes are available in a refill version, helping to reduce plastic waste.

PGP has its numerous sustainability activities assessed annually by the external platform, EcoVadis. This impartial analysis demonstrates the extent to which the company integrates sustainability into its business activities. In January 2026, PGP received a silver rating. This places the company among the top 15 percent of EcoVadis-assessed companies.

The PGP and Dreumex team cordially invites all interested parties to visit booth 11.101. There, you can learn more about the company's commitment to sustainability and discover the many products and services offered by the experts in occupational skin care, hand hygiene, and surface hygiene. The PGP and Dreumex teams look forward to exciting encounters and interesting discussions.

THE COMPANY

Skin protection, skin cleansing, skin care and disinfection: these are the four pillars of Peter Greven Physioderma GmbH (PGP). This family-owned company, based in Euskirchen, was founded in 1923 and is now led by the third generation. It offers extensive solutions as a globally operating provider in the field of occupational skin care and hand hygiene. Its four product lines, Physioderma, Greven, Dreumex and Myxal, form the basis of holistic skin care management. PGP experts provide individual consultations to customers, covering everything from hazard analysis to hand care plans. PGP is constantly working to further develop its occupational skin care solutions and is considered an innovation leader in this field in Germany. The company collaborates with leading German universities in its research. The company has its own research and development laboratories and branches in the Netherlands, France, and the USA, and serves customers worldwide. It is part of the Peter Greven Group, which has production facilities in Germany (Euskirchen and Bad Münstereifel), the Netherlands, Malaysia and the USA. Around 500 employees worldwide serve customers from over 85 countries.
