

A specialist range of supplementary yacht equipment
sought by the most distinguished superyachts.

ABOUT US

Shipyards Supply Co. (SSCo) provides a wide range of exceptionally high-quality and long-standing deck equipment for superyachts worldwide.

Our dedicated team of world-class naval architects, designers and engineers combine to provide an unrivalled turnkey solution, appealing to yacht owners seeking the finest products, that will stand up to the rigours of daily use onboard.

From tender hover chocks and jet ski lifts, to games decks and awnings, our team look forward to bringing your ideas to life.

WHY CHOOSE US?

Supplying retailers throughout the industry, our deck products have been an integral part of the superyacht supply chain for over a decade.

Manufacturing luxury marine products dedicated to meeting the needs of the finest yachts around the globe, we have earned an exceptional reputation across the oceans.

Collaborating with all major shipyards, our team are involved in consultation from the earliest stages of a project. Recognised for our problem-solving, precision engineering, we have supplied directly to the likes of M/Y U81, Infinite Jest, Opera, Kensho, Ocean Victory, Here Comes the Sun, Maryah, AHPO, Anna, KAOS, IJE, and Lady Moura, to name but a few.

Shipyards Supply Co (SSCo) is part of the Superyacht Tenders and Toys (SYTT) group, a consortium of specialised companies dedicated to providing exceptional products and services to the superyacht industry. The group are proud to manufacture in the UK.

TENDER MOORING WHIPS

We design and manufacture our own tender whips at our dedicated facility in the UK.

Our specialist range of Tender Mooring Whips deliver complete peace of mind when securing your tenders at a safe distance from your yacht. Supplying mooring whips to at least half of the world's top one hundred largest yachts, our reputation for build quality and after-sales care is second to none.

Suitable for almost any type of tender, our mooring whips feature an internally run whip line. Clean lines and little-to-no risk of snagging, knotting or crossing makes our second-generation mooring whips unmistakably the most superior product in the market.

We also offer various whip installation accessories.

Fibreglass Tender Whips

Suitable for use with smaller tenders (notably up to five metres or 7000kg), our fibreglass boat whips (also known as GRP whips), come in lengths of four and five metres.

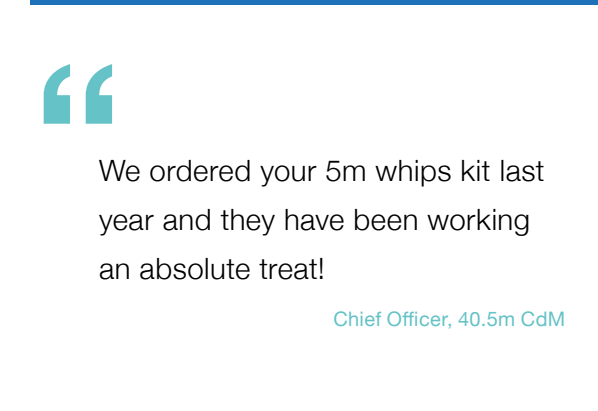

All of our boat whips feature our trademark internal line that incorporates stainless steel ferrules at the entry and exit points, helping to reduce line chafe. Lines are tensioned with a high-quality Spinlock PXR cleat, while an overflow line bag is provided.

Carbon Fibre Tender Whips

Our revolutionary carbon tender whips are manufactured from carbon fibre in a multi-directional layup, increasing stiffness but reducing weight.

Deployed on superyachts around the world, our trademark carbon mooring whips are designed specifically for large tenders.

Available in five and six metre lengths, our carbon whips are the optimum mooring solution for tenders in excess of 7000kg.

“

We ordered your 5m whips kit last year and they have been working an absolute treat!

Chief Officer, 40.5m CdM

FENDERS

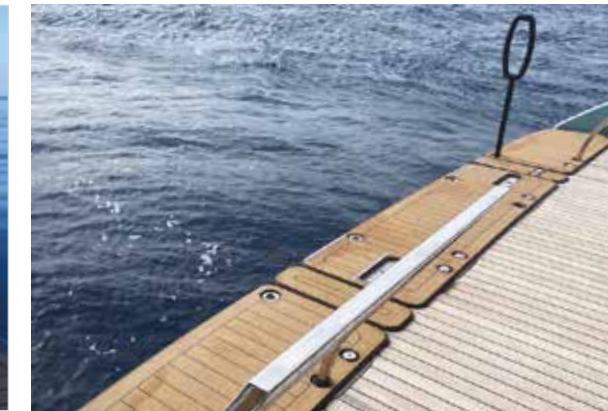

Prevent damage to both tender and mothership with our market-leading fender systems — ranging from high-impact, foam-filled fenders to our Carbon Pillar Fenders.

At the fore of fender design and manufacture, our systems are engineered in close collaboration with crew on yachts around the world, helping us develop a set of systems to suit every scenario.

Whilst the humble inflatable fender has a place onboard every yacht, our advanced fenders deliver the highest degree of craftsmanship, impact protection and sophistication on the market.

Our Transom and Pillar Fenders are made to order to ensure the perfect fit.

Carbon Pillar Fenders

Our vertical Carbon Pillar Fenders add protection at a height not provided by Transom Fenders. Engineered from high-density foam, the fender gives impact protection, whilst extending stability to tenders. Stainless steel handles can be added to provide the perfect handhold for passengers.

Typically weighing only 15kg, a single crew member can handle our Pillar Fenders, making their set-up and pack down a straightforward task. They also come with a storage bag as standard.

Transom Fenders

Under near-constant use for docking tenders, launching water toys and mooring stern-to, a transom can regularly suffer impact damage.

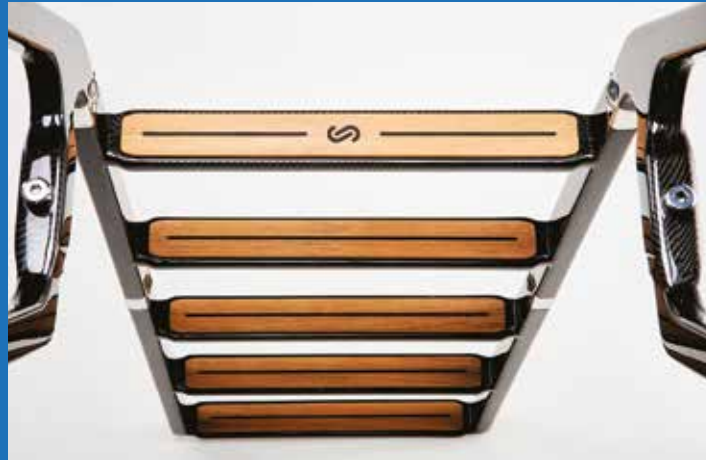

Thankfully, our made-to-measure Transom Fenders, which offer the highest level of impact protection on the market, help ensure this busy throughfare remains unscathed and feels luxurious underfoot.

Folding Foam Fenders

Designed to provide instantaneous protection for a small transom or swim platform, our Folding Foam Fenders are quick to install and easy to stow. A modular arrangement, available in 500mm and 1000mm lengths, our folding fenders offer a rapid 'plug and play' solution.

LADDERS

Our ladders offer a sleek and stylish way of getting in and out of the water.

Swim Ladders

Transom Swim Ladder:

Easily exit the water using our beautifully refined Transom Swim Ladder. Incorporating five rungs as standard, the length can be customised with additional rungs. Built with a raked form, this ladder goes some distance in emulating a staircase under the water. With a standard length of 3.6 metres, there's no need to tread water when you can step straight onto our Transom Swim Ladder.

Tender Swim Ladder:

Optimised with storage in mind, our Tender Swim Ladder features a boxy design that is easy to stow. Flat-edge handles sit flush with the tender, in turn providing structural support. Detachable handles with smooth pins make set up and pack down a breeze, while a hinge at the first rung allows the entire ladder to sit above the waterline when folded.

Rope Ladders

With the look of a pilot ladder but without the industrial feel, our access Rope Ladders marry form and function without being an eyesore. Popular with crew, the wide treads with Sika caulking make traversing the ladder a comfortable experience.

The side ropes are fabricated from a double-braid rope, while rubber bumpers on each step prevent damage to both ladder and hull. Stainless steel eyelets are spliced in the ends for shackling onboard.

BOARDING POLES

Ensure safe and reliable guest transfer with our Carbon Boarding Poles.

Lightweight and quickly removable, our Carbon Boarding Pole is designed to help guests transfer to and from a tender or transom. The ergonomic handle design is comfortable to grip, while the deck socket arrangement prevents the Boarding Pole from rotating when in use.

Our Carbon Boarding Poles are manufactured on site at our dedicated facility in the UK. We also produce our own composite moulds. This enables us to supply bespoke designs to other suppliers and boat builders.

GARAGE

We provide innovative storage solutions for superyachts of all sizes.

No matter how big a boat, space will always be at a premium. Fortunately, we have decades of collective crew experience when it comes to running a tight ship.

Whilst the work onboard is a team effort, we recognise the opportunity to simplify many processes through innovative design and manufacturing. Motivated by a perfect fit, our ethos is to build products that look exceptional and withstand the rigours of yachting life.

We supply superyachts around the world with storage solutions, including chocks, cradles, lifts and beams.

Tender Chocks

Made to order, we can deliver chocks to match any size or shape of tender. Available as retractable, removable or flush in either composite, carbon, aluminium or stainless steel, our Tender Chocks are designed to suit your yacht's precise criteria, hull geometry and space constraints.

Featuring solid foam or cork pads, your tender's hull shape and girders dictate the exact profile of your chocks.

Tender Hover Chocks

Float your boat on a bed of thin air with our revolutionary Tender Hover Chocks.

With the air pressure engaged, the chocks hover at just 5mm above the deck, allowing the tender to be pushed around by hand without needing a crane. To cease hovering, an air supply shut-off valve is operated, safely lowering the chocks onto the deck.

All components are self-contained within the chocks, providing a turnkey solution for moving and storing tenders onboard; all that's required is an air supply and hose.

Jet Ski Trolleys

Our Jet Ski Trolleys come in adjustable and ultra-low versions. The adjustable version can easily cater for a range of personal watercraft, while the ultra-low version is made to measure.

Demonstrating remarkable strength and rigidity, our ultra-low trolley sits just 8mm above the deck, maximising lifting height. Given the lowest possible centre of gravity, large jet skis are easy to manoeuvre with four heavy-duty lockable wheels.

Jet Ski Cradles

Our Jet Ski Cradles offer a permanent off-the-floor jet ski storage solution for garages or decks with a crane. Constructed from either marine-grade aluminium or mirror-polished stainless steel, your jet ski hull sits snugly between fixed bars which are wrapped in either leather or Hypalon.

Where you have a little more headroom, we can manufacture a stackable version of our Jet Ski Cradle.

Jet Ski Lifts

Effortlessly raise your jet ski off the garage floor with our electric Jet Ski Lift. An innovative storage solution, our chain-free, wall-mounted Jet Ski Lift has a capacity of over 500kg (e.g. easily accommodating a Sea-Doo 300 GTX).

Despite being electrically operated, all components are IP rated, and as a result, the lift can be washed down like all other kit in the tender garage. Supplied with a purpose-built low-profile trolley, the lift allows you to store two jet skis in the same footprint as one.

Lifting Beams

Lifting Beams and Spreader Bars are crucial in the safe movement of tenders and toys on and off yachts.

Engineered to accommodate your specific circumstances, our carbon lifting beams offer a substantially lighter and more manoeuvrable alternative to steel. All our beams undergo Finite Element Analysis (FEA) and are fully certified, tested and approved.

GAMES DECKS

Whatever your sporting passion we have a Games Deck to suit you.

You name the sport and we'll design the court. From tennis to basketball, padel ball to football, we produce Games Decks to suit even the most economical spaces.

The perfect environment for sports participation isn't generally forthcoming when you are out at sea. Our multi-purpose Games Decks have revolutionised onboard sports.

Working closely with the owners and crew of various superyachts, we have developed a radical and flexible Games Deck which drastically reduces the set-up and breakdown time of more extensive sports courts.

Made from pre-preg carbon fibre, our court components are lightweight but super strong and easy to assemble. We design enclosures for both foredecks and heli-decks with the option of high-strength mesh netting or acrylic panels.

Our Games Decks are engineered to mount to existing handrail sockets. Alternatively we have our own unique, freestanding version.

Complete with carbon fibre goals and LED floodlights, your floating arena is always ready for a match.

“

It's been a pleasure working with you guys and I look forward to keeping it going. You've delivered when no other supplier could, so we are very grateful for your help and support

STEPS

The humble, stand-alone Dock Step is essential to any superyacht inventory.

Fibreglass Dock Steps

Bridging the gap between low docksides and high passerelles, a dock step should not only be rigid and supportive but should also make a reassuring first impression.

Also used to help guests board tenders or step into hot tubs, our high-quality, long-lasting Dock Step has a multitude of uses on and off the mothership.

Carbon Fibre Dock Steps

Available with a choice of Esthec or teak treads, our Carbon Dock Steps offer a clean and contemporary look to a traditional, time-honoured product.

The perfect link piece for boarding and disembarking, our versatile Dock Steps can be used on a transom, swim platform, tender or dockside.

Folding Steps

Folding to a mere 12cm deep, our hand-crafted Folding Dock Step is the perfect solution for yachts striving for an artisan feel but where storage space is at an absolute premium.

Made from highly durable Iroko wood, the unique design of these folding steps offers amazing stability, enhanced by a large 60cm hinged square top.

Often referred to as African Teak, Iroko has a rich-coloured grain making it a fine choice for yachts seeking a classic look.

Open Steps

Make an entrance (or, indeed, exit) with our elegant Open Steps. Removing the need for a boxy design, the clever staircase configuration utilises either carbon fibre or stainless steel arms affixed to a GRP or carbon fibre base.

Teak steps with a choice of black or grey caulking help create a seamless transition from yacht to dock.

Available with up to four steps and with or without a stainless steel handrail, these graceful boarding steps are like nothing else on the market.

AWNINGS

Create shade for your guests with a contemporary yacht canopy system.

Transform large open deck spaces from being blisteringly hot (or soaking wet!) to a perfect environment for lounging with our custom designed awnings.

Handmade in the UK, our yacht canopies can be designed in any shape or size using lightweight waterproof and UV-resistant materials.

Our versatile awnings utilise existing fitting points on the boat to dispel the need for additional battens or frames.

Yacht Awning Poles

We design and manufacture modern awning and pole systems for yachts of all sizes.

Featuring a minimalist design and manufactured from high-tensile composites, our Awning Poles are recognised in the industry for their light weight and rigidity.

Fabricated from carbon fibre with a variety of line tensioning options, the Awning Poles not only look highly refined but work extremely well in all weather conditions.

All poles are clear coated as standard but can be painted to match the awning or existing paint scheme onboard.

“

We called Shipyard Supply Co. with a very last-minute order. They got it processed, shipped out and into our hands as fast as we could possibly hope.

Captain, *SV Princess Chloe*
