

Ch@tSea™

ALL-IN-ONE SAFETY ON A SINGLE MAP

Ch@tSea™ is a secure maritime communication and safety application that brings essential navigational safety information and real-time communication together on one interactive map.

Built on international e-Navigation standards and powered by trusted maritime digital infrastructure, Ch@tSea™ connects people, services, and safety data in one place — the map you already navigate by.

A New Foundation for Digital Maritime Safety

From recreational boaters to professional mariners, Ch@tSea™ delivers critical safety information and seamless communication on a single, always-updated map.

Everything happens on the map — hazard alerts appear where they matter, nearby vessels become visible, and conversations happen right where the action is. Ch@tSea™ is redefining what a maritime safety app can do.

Why Ch@tSea™ ?

Ch@tSea empowers mariners to see, share, and respond to safety information — protecting not only themselves, but also others navigating nearby. One map, one place to stay safe together.

WHAT Ch@tSea™ DELIVERS

Maritime Safety Services on the Map

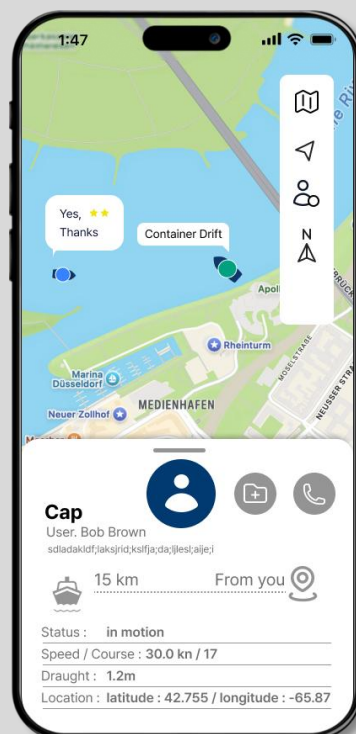

Essential safety information from official maritime authorities, visualized directly on your map.

Subscribe to services from multiple countries and see Marine Protected Area (MPA) regulations, navigational warnings, and other critical alerts as clear visual layers — right where you need them, without switching between apps or websites.

Instant Hazard Sharing

Detected hazards can be shared immediately with nearby vessels — on the map.

When you spot a risk, alert others around you in real time. This location-aware exchange helps mariners respond earlier, avoid danger more effectively, and strengthen collective safety on the water.

Location-Based Messaging

Communication happens where it matters most — on the map.

With bubble chat, send real-time floating messages to vessels around you. See nearby boats, start a conversation, and connect with verified mariners — all without leaving the map view. For deeper conversations, switch to secure, encrypted 1:1 chat.

Trusted and Verified Maritime Environment

Ch@tSea™ is built on the Maritime Connectivity Platform (MCP), an internationally recognized digital infrastructure for maritime services.

Every user is identity-verified. Every message is end-to-end encrypted. Every data source is an official maritime authority. As the first commercial application built on MCP, Ch@tSea™ delivers international maritime digital standards as practical, everyday value — starting with the map you already use.

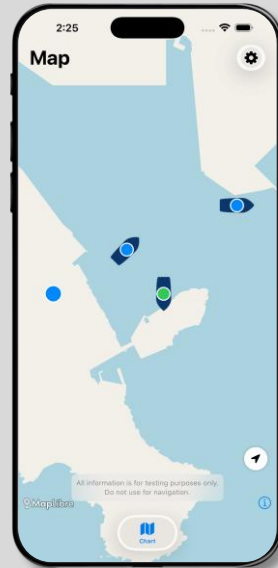

Nearby Users

See who is nearby — and let nearby users see you — directly on the map.

Turn on the Nearby Users toggle to share your live position with other app users around you and display them as map markers.

Tap a nearby user marker to view their ID and GPS coordinates. If that person is already Connected with you, Ch@tSea™ also shows their verified name and email.

Nearby Users toggle: ON
