

HYDROSOLUBLE

Technical Datasheet

Aeodorizing Agent for Neutralizing Odors

Description

The Hydrosoluble Substrate allows the application of Scentechologies formulas through nebulizing sprays.

The product is prepared by dissolving the Actives in water, using emulsifiers. Once dissolved in water, it can be dispensed using a nebulizing spray gun or through an automated dispersion system.

The main advantage of this application system is its simplicity. Additionally, its effect is immediate.

Application Systems

- In indoor spaces, the product is primarily used to eliminate odors that occur discreetly. For example, to remove the smell of tobacco when someone smokes. Typically, it is used in rooms.
- On an industrial level, this system can be used to treat large outdoor spaces by creating mists. In this case, the product is used in a very diluted form and is dispensed using pressure nozzles.

Usage Guidelines

The product is introduced into a bottle and applied using spray guns.

On an industrial scale, complex systems consisting of tanks, pumps, nebulizers, and a timer are used to regulate the application.

Storage Conditions

One year in its original sealed packaging, protected from light, and at a temperature below 25°C. Six months under conditions of use.
