EASY-iQ CONTROLLER

PRODUCTS DETAILS

The Autotrol 255, and the Autotrol Performa 263/268, 269 and 278 are now fitted with a brand new Autotrol Easy-iQ controller!

Standing out for its simplicity, this controller features a customizable multi-lingual colour display and intuitive programming menus dedicated to homeowners, installers and OEMs. It is also equipped with a USB-C port for easy software updates on the field and a particularly useful vacation mode pausing all operation when there's no one at home.

MULTILANGUAGE DISPLAY

The Easy-iQ is equipped with a backlit graphic display and a quick start-up menu available in multiple languages, providing excellent visibility in various lighting conditions and enhancing user convenience through intuitive and accessible operation.

AVAILABLE IN

DE / EN / ES / FR / IT / NL / PL

The Display on the controller visually indicates the operating status of the valve.

The screen of the display changes color based on the operating state:

- White color: the valve is in service
- Green color: the valve is in regeneration
- Yellow color: a minor error has occurred
- Red color: a critical error has occurred

This color-coding system allows to quickly and easily understand the status of the valve, at a glance, ensuring efficient monitoring and timely intervention if necessary. Moreover, the retro-lighting color of the service mode can be customised.

APPLICATIONS

Residential and light commercial applications

CUSTOMER BENEFITS AND CORRESPONDING TECHNICAL FEATURES

Customer Benefits	Corresponding features
Quality product to ensure that product can meet a variety of water quality needs they encounter	Continuing the legacy of Logix simplicity with one simplified timer, but same legacy Autotrol valve design
Longer product life through durable design	Corrosion-proof construction
High flow rate and efficiency	High performance control valve
Fast and simple programming + improved commissioning to save time (time is money)	Retro illuminated, multilingual graphic display and quick start-up menu
Safe and fast access to the exact set of menus	Various programming menus including modules for users, installers and OEMs specifically
Simplified step-by-step programming with customizable parameters (regen cycle times etc...)	Pre-programmed, modifiable parameters
The valve is constantly kept at its best performance	USB-C port makes programing upload or software updates possible in the field
Facilitates communication with homeowner	Dealer contact information display
Prevents bacterial proliferation during no water usage periods	New vacation mode
Quick upgrading of existing model base with minimal cost of changeover	Retrofitting capabilities with Logix model with quick-start-up menu and minimal programming needed
Simpler inventory management is important to help run a profitable business	Only one controller to help simplify inventory mgmt
Improved notifications cadence: only critical updates needed for their business	Only low salt or leakage notifications
Modern design and improved aesthetic	A product that communicates product value
Price will be simplified, staying in the range of Logix basic and advanced to allow for maintaining market strategy	One price only instead of multiple price level
