

INTRODUCING

SMART STEERING

The new age steering revolution

The new age steering revolution proudly developed by Glydus, in the marine steering systems for small outboard engines up to 90 HP

SMART STEERING

Smart Steering (Patent Pending) by Glydus is a first-of-its-kind marine steering category designed to replace outdated cable steering systems in boats up to 90 HP. Engineered for easy retrofitting, compact size, zero feedback, and negligible maintenance, it introduces a revolutionary new category: Smart Steering

This isn't a modification of existing technologies—it's a complete rethinking. Smart Steering is the future of small boat steering.

THE NEW AGE STEERING REVOLUTION

EXPERIENCE EFFORTLESS CONTROL

Glydus Packaged Smart Steering (Patent Pending) is a revolutionary marine steering system developed to replace outdated cable steering systems for boats powered by up to 90 HP engines.

It introduces a completely new category in marine control smart steering designed specifically for small boats.

The Problem with Traditional Cable Steering:

- Requires frequent maintenance
- Prone to cable or helm failure due to breakage or seizing
- High steering effort caused by feedback at the helm
- Performance is dependent on cable length and routing
- Regular replacement leads to higher long-term costs

Why Not Hydraulic or Power-Assisted Systems?

- Hydraulic, electric, and power-assisted steering systems are typically bulky, over-engineered, and too expensive for small boats.
- They are not optimized for the 90 HP segment, making them an impractical choice for most boaters in this category.

ADVANTAGES OF GLYDUS SMART STEERING

- A Game Changer:
- Affordable: Cost-effective solution tailored for small boats
- DIY Friendly: Comes as a complete, easy-to-install kit
- Compact & Lightweight: Fits easily in tight spaces
- Maintenance-Free: No cables, no grease, no regular upkeep
- Smooth, Responsive Steering: Offers precise control with zero feedback at the helm
- Universal Fit: One kit supports all mechanical steering setups—no learning curve for retrofitting
- Inventory Friendly: Reduces SKUs and simplifies stock management for OEMs and dealers
- Enhanced Safety & Comfort: Improves the overall boating experience
- Eco-friendly
