NOMEN Cleat IV - The platform cleat

The new NOMEN Cleat IV has been developed for the use on platforms and boat garages where tenders or toys are moored on large yachts.

When not in use, the cleat disappears under a spring-loaded stainless steel cover that is flush with the deck. The cleat is held securely in the upper and lower positions by a stainless steel spring, so that no loose parts can hinder the closing process on pivoting platforms.

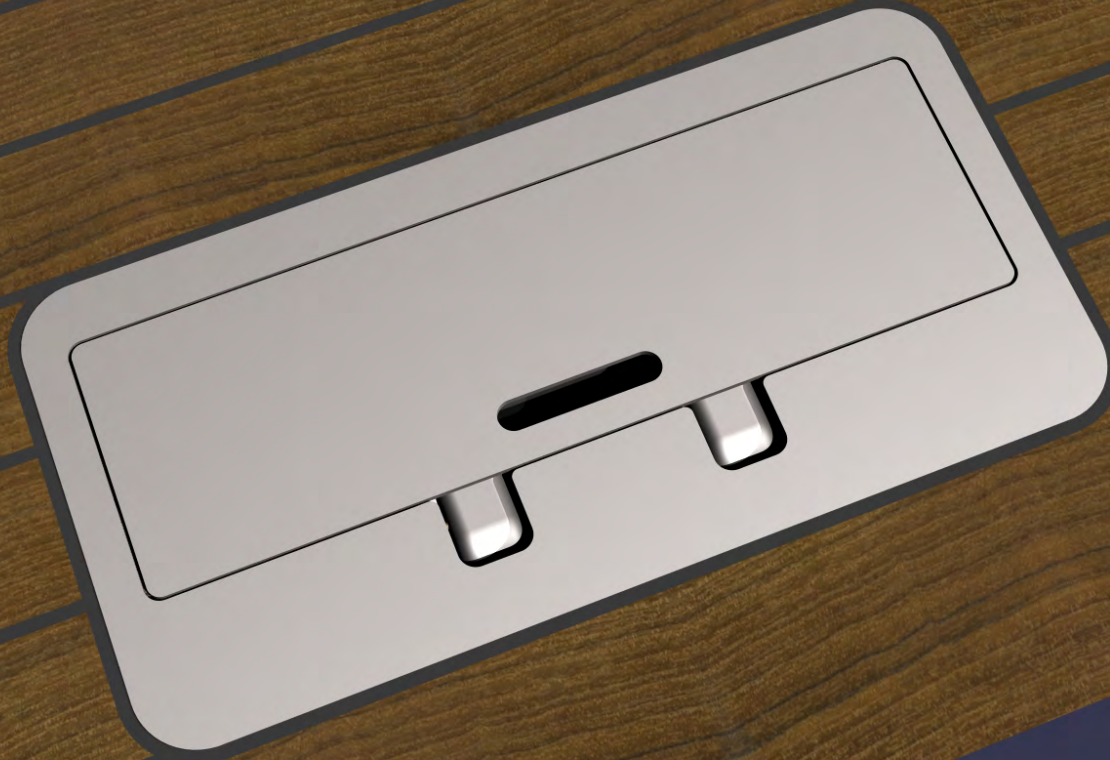

NOMEN Cleat IV - Die Plattformklampe

Die neue NOMEN Klampe IV wurde für den Einsatz auf Plattformen und Bootsgaragen auf großen Yachten entwickelt, um Tender oder Toys zu vertäuen.

Wird die Klampe nicht gebraucht, verschwindet sie unter einem federbelasteten Edelstahldeckel, der bündig im Deck eingelassen ist. Die Klampe wird von einer Edelstahlfeder in der oberen und unteren Position sicher gehalten, so dass bei schwenkbaren Plattformen keine losen Teile den Schließvorgang behindern können.
