

“KIWAJET” RETRO REFLECTIVE TARPAULIN FABRIC FOR SOLVENT TYPE INKJET PRINTING SYSTEM

“KIWAJET” Retro Reflective Tarpaulin Fabric is a reflective media which can easily be printed and fabricated to signboards. By using solvent ink type inkjet printing machine which is popularly available, the media can be quickly printed and can also be applied at working sites in a short time.

Reflective Tarpaulin Fabric is manufactured using the same basic technology as glass bead type traffic signs erected on highways and streets and does not require electric power, and reflection can be obtained with the headlights of automobiles running on highways and streets.

Tarpaulin Fabric is particularly useful as the temporary traffic sign boards before the permanent traffic signs are fixed. It is also a possible option to change the signboards frequently to enhance eye-catching of commercial sign boards. The cost of investment can be greatly saved and more impact can be given to viewers.

Tarpaulin Fabric can be fixed on the frame with nails, staples or string, as it does not tear easily.

RETRO-REFLECTION EFFECT:
As shown in the picture, the printed images emerge with the headlamp beam of automobiles hitting.

The application work is so easy; just punch eyelets and fix the fabric to the frame with strings. As the materials are very light and easy to handle, the skill is therefore not important.
