

ELITE MARINA SYSTEM

PRODUCT GUIDE

Product Highlights

Tried and proven heavy duty commercial system

Constructed using reinforced concrete deck and a solid monolithic flotation system protected by a tough and flexible polyethylene skin

Smartly finished with a customised aluminium water that incorporates a unique press-in bump fender which eliminates the need for screws

Independent expansion and contraction from the flotation and concrete deck

Attractive, durable, element resistant and functional

Custom rotomoulded polyethylene service pits to accommodate electrical, water and fire services

The versatile connection with elastomeric hinges allows for simple reconfigurations of the marina fingers without extensive design changes

The water also allows for adjustable positioning of pile brackets, hinges and fingers

The concrete deck can be 'broom' finished or carpeted

Utility services for power, water, data and fire can easily be incorporated via purpose-built conduit ducts running inside the pontoon

Low/zero maintenance required

No timber or through bolts to constantly tighten

The specially formulated Superior Elite Pontoon System is suitable for any single application to large scale commercial marinas. . A simple yet extremely durable connection with our elastomeric hinge allows for the natural movement from wave action within the marina system and an easy connection to the Super Elite Pontoon System.
