

SAVING ENERGY?

How the BIMCO DEHUMIDIFIER saves energy:

With the BIMCO in the cultivation space, you can keep the ventilation openings and screens closed at night or on moist or cold days and treat humidity from the inside. This prevents unnecessary heat loss and retains all the warmth in the space.

Compared to heating and ventilating, isolating the greenhouse and using the BIMCO to control humidity at night can save up to 50% of energy.

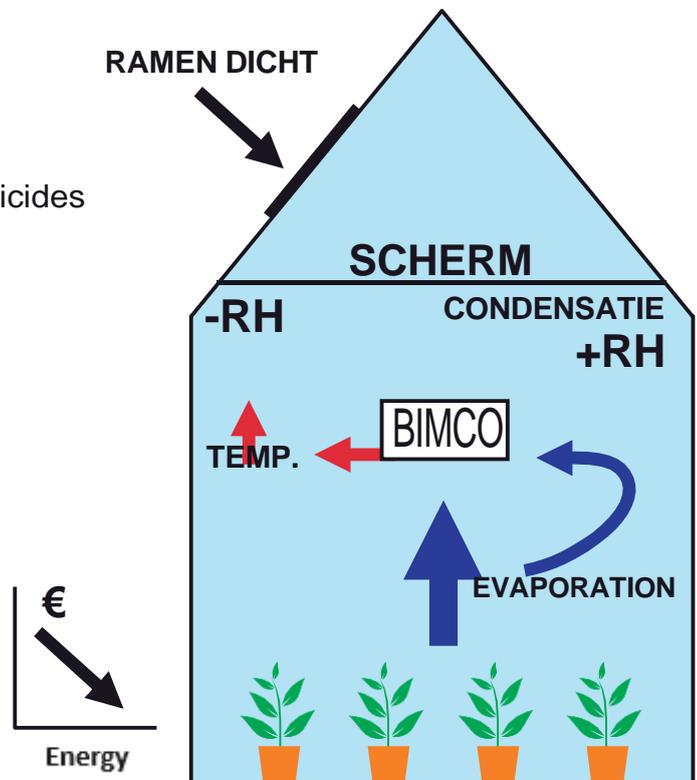

By powerful extraction, you reduce humidity and prevent condensation. This combination ensures that diseases have less chance to spread.

The benefits:

- Saving Energy
- Uniform plants/flowers/vegetables
- Creating homogeneous conditions
- Preventing fungi and diseases without pesticides
- Improving plant quality
- Increasing yield

Benefits of BIMCO:

- Compact unit
- Easily installed
- Horizontal blowing direction (in line with the direction of existing fans)
- No heavy wiring required (C16 zekeren)
- Full stainless steel
- Multiple units per section which results in a better air distribution
- Up to 50% energy savings possible
