

EvoHide®

**The sustainable
choice designed
for durability**

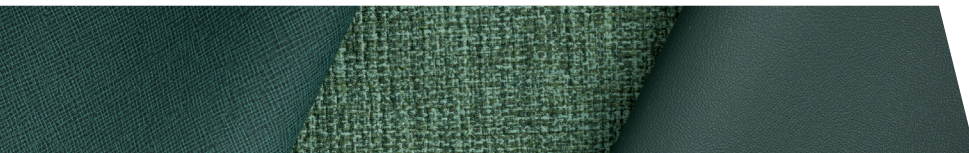

Our 2021 groundbreaking EvoHide® formulation now achieves **96% sustainable content** and has become a benchmark for sustainable innovation.

By combining highly bio-sourced & recycled elements:

- **Bio-attributed resin** made from renewable forestry industry feedstock
- **Bio-based plasticisers** derived from waste such as used vegetable oils
- **100% recycled polyester backing** made from post-consumer PET bottles

EvoHide®'s green chemistry is featured in three stocked ranges; Mistral FRee, Zephyr FRee, and Dream FRee, suitable for **indoor and outdoor use** across marine, transport, and contract environments.

Free of chemical Fire Retardant (FR) additives, yet inherently meeting the European fire norm EN1021 (Parts 1&2), each range combines distinct design with **durable, easy-clean and eco-friendly performance**.

Available from stock in Europe

Custom solutions

EvoHide® can be specified for bespoke production runs*, allowing you to align product functionality with the growing consumer demand for environmentally responsible materials.

*MOQ applies
