Innovative Central Joint: Strength and Seamless Operation

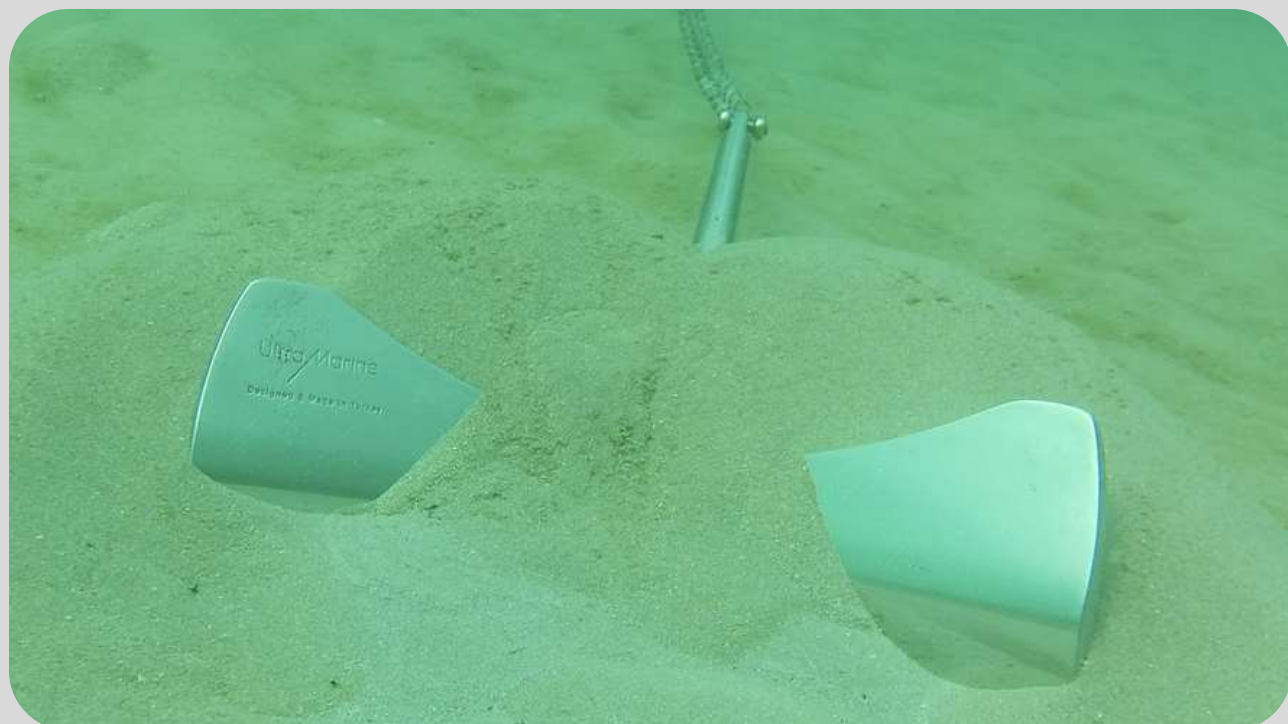

The standout innovation of our Stockless Anchor is the central joint, which boosts the anchor's strength while allowing smooth burial.

Its smart, self-cleaning design ensures continuous operation and prevents the anchor from becoming lodged in difficult positions.

Smart Wing Angles: Maximizing Stability

The shoulder wings are angled to minimize resistance with the soil, allowing seabed material to flow through effortlessly. As the ULTRA Stockless Anchor experiences increased strain, it buries itself deeper, ensuring an even more secure anchoring experience.

Optimized Shank Design

The uniquely slanted shank design sets our anchor apart, enabling it to cut through the soil with minimal resistance and significantly enhancing its burying capabilities.

Utilizing Duplex Steel in the construction allows us to create a hollow interior, offering greater design flexibility.

This approach enables us to produce an anchor that can be made heavier than the standard weight, upon request, without compromising the balance or overall performance of the anchor.

Wider Flukes: Enhanced Stability and Holding Power

Our flukes are engineered with an extended contact surface, which surpasses the area found on conventional anchors. This wider surface improves the anchor's holding power by distributing the force more evenly across the seabed. As a result, the anchor achieves a more stable and secure hold, enhancing overall reliability and performance in various anchoring conditions.

Striking Elegance: Harmonious Curves and Brilliant Shine

The Stockless Anchor is not only a marvel of engineering but also a testament to aesthetic excellence. Crafted from polished stainless steel, it boasts a brilliant shine that enhances its visual appeal. The anchor's design features harmonious curves and sleek edges, combining functionality with elegance. This seamless integration of form and function makes the anchor not only effective but also a striking addition to any marine vessel.

BOYUT

Ultra Marine

Ultra Safe Anchoring

Building on over two decades of innovation, our commitment to excellence has driven us to continuously refine our designs and materials. In 2004 the Ultra Anchor set new standards for reliability and strength, and with the Ultra Stockless Anchor, we aim to redefine once more what's possible in anchoring technology. With its groundbreaking features, we're poised to offer a product that not only delivers unmatched performance but also embodies the elegance and precision that Ultra Marine is known for.

Our mission remains the same:
to provide cutting-edge solutions that keep our customers safe, satisfied, and ahead of the curve.
