## REVOLUTIONIZING MARINE COMMUNICATION

Tailored specifically to enhance Starlink's performance, its lightweight construction, minimalistic aesthetics, and advanced installation functionality redefine marine communication. Hydra Monaco pioneers a new era of unparalleled performance and reliability, exclusively available to yacht owners and operators worldwide with this exclusive fusion of cutting-edge technology and sleek design.

### SOLVING THE PROBLEM

As things stand at present, anyone who wants to install the two technologies (Starlink and 5G) on board can do so, but separately. He has to provide one place to install the LEO antenna and another place to put the 5G antenna(s). In addition, he has to provide more holes for cable runs, run more cables, do twice as much carpentry work, etc., all with a poor aesthetic result.

### EASY & ELEGANT INSTALLATION

Today, the internet is a necessary tool for everyone's life, whether on land, at sea, or on board a boat, train, etc. With the dome we designed and engineered, we will not only provide Shipyards and End-users with a single solution for mounting the two technologies for internet reception but also make the installation work much easier and more aesthetically pleasant.

### FOR OWNERS

Seeking fast and stable worldwide connectivity alongside prompt remote assistance, our dome presents an unparalleled solution, ensuring uninterrupted communication regardless of location.

### FOR SHIPYARDS

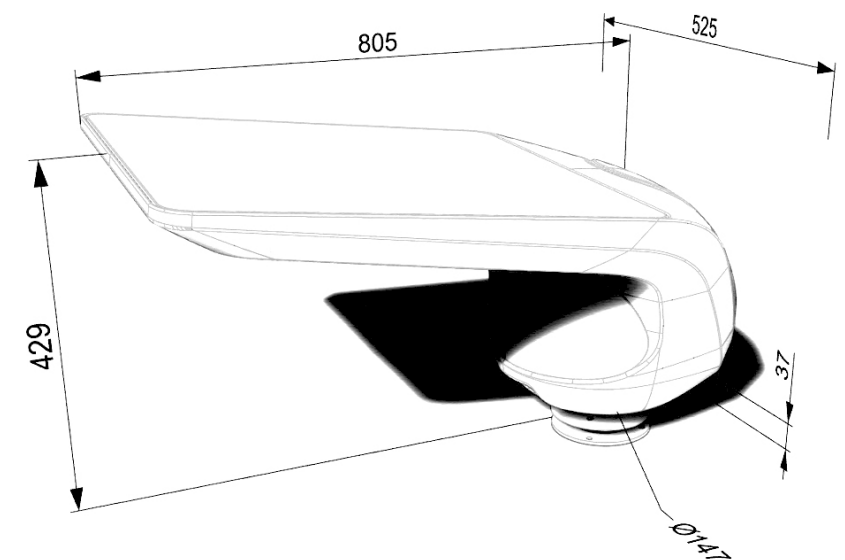

Striving for state-of-the-art equipment with streamlined installation processes and reduced cable requirements, our dome offers the perfect balance of advanced technology and ease of implementation, optimising efficiency and minimising operational complexities.

### FOR DESIGNERS

Aiming to merge creativity with cutting-edge technology, our dome opens up a world of possibilities, enabling the seamless integration of innovative design elements with the latest connectivity solutions.

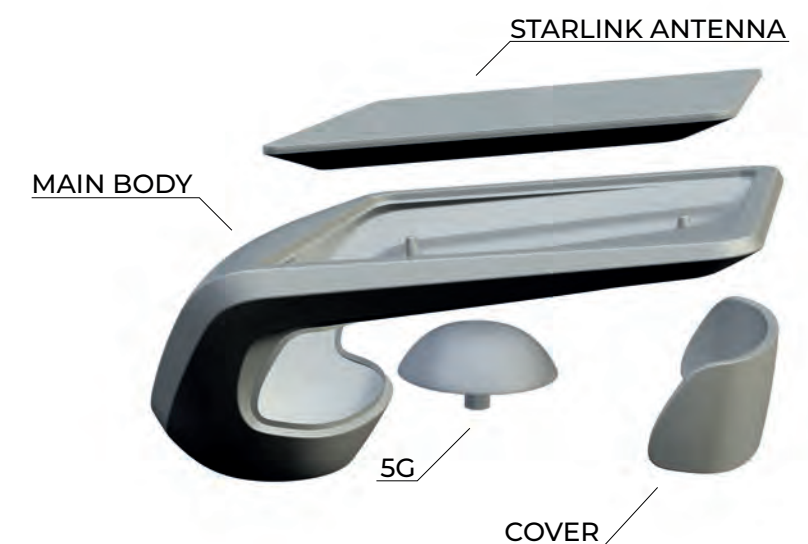

## SPECIFICATIONS

Weight - without Starlink & 5G	8 kg
Weight - with Starlink	12kg
Base Adaptability	KVH, Seatel, Intellian
5G compatibility	Peplink, Taoglass, Poyinting, Saila-Wave
Material internal structure	Stainless steel AISI 304 powder coated for corrosion prevention
Material Body	Fibre Glass
Paintable	✓

## APPLICATION

Motoryachts, Superyachts, Ships, Tugs, Workboats, Military Boats, Ships, Trains, Motorhomes, Planes.
