PRACTICAL AND COMPATIBLE

Lazy-TAC has custom-made **passage channels** that adapt perfectly to the rigging of each boom

DRY MAINSAIL

The passage channels allow the correct outflow of water and ensure constant **natural ventilation** inside the lazy-bag

EASY AND FAST AWNING

Quick assembly of the awning, even **by one person**, without adjustments of lazy-jacks, lazy-bag or rigging

Fits your needs: modular awnings or entire awnings can be installed on one side or both sides of the boom

Ideal also for catamarans and sailboats with bimini

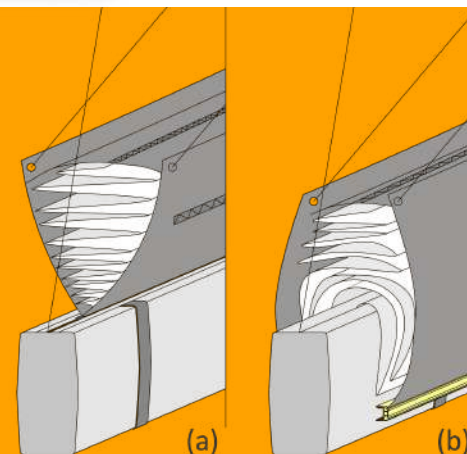

SIMPLE MAINSAIL LOWERING

The **lazy-bag** hoisted to Lazy-TAC (b) assumes a **wider** shaped section, and the lowering procedures and the correct folding of the mainsail are facilitated

CUSTOMIZED

Passage channels and accessories are customized for the customer

EASY TO ASSEMBLE

On new and existing booms, wheter in aluminum, wood or composite

LED LIGHTS

It is possible to position watertight LED lights, placing the electric cables in a specific inner through hole

HIGH MECHANICAL STRENGTH

Lazy-TAC is made of anodized aluminum, and it has mechanical strength and **weather resistance**
