LETS TALK PERIODS & THE WORKPLACE

WOMEN AT WORK ARE QUIETLY SUFFERING

- From being 'caught short' to heavy flows, to endometriosis - it is all going on in the office...and even worse if working off site.
- Disposal can be challenging with unhygienic bins, creating unpleasant experiences and leading to increased flushing behaviour

> "Working off site sometimes there is no toilet at all, let alone a bin!?"

FAB Sustainable Innovation for both The Binners & The Flushers

- **One-handed** use for ease
- **Seals closed** for good hygiene
- Made from sugarcane & recycled materials
- **Opaque** for discretion

Made from 60% sugarcane / 30% recycled material / 10% renewable cornstarch... *even the glue is vegan!*
As the sugarcane grows the material absorbs CO2 locking in carbon.

3.9 MILLION TAMPONS & PADS are flushed EVERY DAY in the UK!

Flushing causes blockages and leads to pollution of our rivers, oceans and beaches

- These blocked sewage systems lead to increased water bills too
- Businesses suffer with on site costly blockages (£ & reputation)
- Most people don't even know or understand why this is happening

MOST 'FLUSHERS' FLUSH OUT OF IGNORANCE.
PERIODS & DISPOSAL, REMAIN A TABOO SUBJECT SO NEVER DISCUSSED....
