

The future of smart, ticketless parking is here

Entringo offers a cutting-edge parking management solution powered by smart, ticketless technology using License Plate Recognition (LPR). From centralized access control to pay-by-number options and integrated mobility services, Entringo covers all imaginable parking needs.

It features ticketless operation, ultra-high accuracy, automated guidance, and modular design for tailored solutions.

With multi-modal integrations and a focus on sustainability, Entringo provides a seamless and eco-friendly parking experience while creating new revenue opportunities for property owners.

Lithuanian Airports

Tackling all parking challenges at once in Lithuanian airports

Entringo's Smart Parking Concepts

Seamless Access and Control System

Secure and efficient access and exit with centralized control

Tailored Parking Solutions

Supports kiosks, mobile payments, dynamic pricing, and contract billing

The value Entringo helps generate for your organisation

LPR-based ticketless parking

No paper tickets, reduced costs, and efficient parking through number plate recognition.

Durable & low-maintenance

Durable and long-lasting hardware that significantly reduces operational costs.

Multi-modal integrations

Seamless connection with mobility services like Park & Ride and airport parking.

Automated guidance system

Smart visual signage and intuitive driver assistance reduce manual intervention.

Destination EV charging

Generate revenue with independent EV charging services without relying on large CPOs.

Complete parking ecosystem

Integrated access control, payments, and local mobility services like EV charging.

Ultra-high accuracy

Advanced recognition technology ensures precise number plate handling.

Sustainable

Ticketless, durable design with low maintenance for long-term efficiency and cost savings.

Modular & customizable system

Scalable hardware and software, from simple access control to complex parking management.

Maximized parking revenue

Smart data insights enable overselling, improved planning, and optimized space utilization.
