ARV GLOBAL HOLDING

Innovating for a More Resilient World

At ARV Global Holding, we take a forward-looking approach to some of today's most critical challenges. Our mission is to develop high-impact solutions in response to environmental change, evolving fire risks, the housing crisis, and advanced healthcare needs.

Professional Procurement Across Diverse Sectors

Operating under the ARV Global Holding umbrella, ARV Supply Solutions BV. is a specialised procurement and supply chain company. With strong expertise in tender management and strategic sourcing across multiple sectors, we support product development, resource procurement, and end-to-end service delivery.

Sector Diversity: Product development and sourcing for a wide range of industrial and public-sector needs

Tender Management: A professional approach to complex procurement and tender processes

End-to-End Service: Integrated supply chain solutions from development to final delivery
Delivering Long-Term Value for Our Partners

Our strategic focus includes public institutions, corporate buyers, distributors, and wholesalers. We are committed to securing high-quality products at competitive market conditions while supporting long-term reliability, sustainability, and operational value for our partners.

Quality Assurance: Careful product selection and sourcing through trusted manufacturing partners

Economic Sourcing: Competitive pricing supported by market knowledge and procurement discipline

Sustainable Operations: Efficient and responsible supply processes built for long-term cooperation

Company Profile

ARV Supply Solutions B.V. is an Amsterdam-based procurement, sourcing, and distribution partner focused on consumable and hygiene products for professional wholesale channels. The company was established to bring over 20 years of tendering, procurement, and supply chain expertise from Turkey to the Netherlands and the wider European market.

We operate with a practical wholesale mindset: the right product, the right specification, the right logistics set-up, and the right commercial model. Selected product groups are manufactured directly under our own brand through approved production partners, while other categories are sourced from trusted manufacturers and supplied to wholesalers and distributors through trading and partner-brand structures.

Our international supply network includes carefully selected manufacturing partners in India, Vietnam, Malaysia, China, Poland, Czechia, Bulgaria, and Turkey. This gives our customers access to competitive pricing, flexible production capacity, continuity of supply, and multiple origin options for varying specifications and tender requirements.

ARV differentiates itself by combining strong tendering and procurement expertise with direct factory access and flexible trading capability. Our core value proposition is built on reliable sourcing, transparent communication, consistent quality, and dependable delivery planning. For professional buyers, price alone is not enough; continuity, specification control, and a supplier that understands wholesale logistics are equally critical. ARV is structured with the European market in mind, with product language, documentation, and commercial presentation standards aligned with Dutch and wider EU B2B expectations.

Vision, mission and commercial promise

ARV is committed to being recognised as a trusted European sourcing and distribution partner for wholesalers who value scale, flexibility, and dependable execution across hygiene, disposable, and facility supply categories. Our business model combines direct manufacturing access, multi-country sourcing capability, and disciplined logistics to support confident purchasing, continuity of supply, and long-term commercial reliability. We create value through competitive positioning, technical clarity, responsive quotation management, and practical procurement support, while maintaining a transparent and dependable approach to specifications, lead times, documentation, and origin options.

Sustainability remains an important part of our long-term commercial perspective. In line with evolving market expectations, we continue to expand recyclable and lower-impact alternatives across selected paper, packaging, and cleaning product ranges where commercially relevant. This approach is supported by structured delivery planning, scalable container-based purchasing, flexible sourcing models, and strong operational attention to documentation, packaging efficiency, pallet optimisation, and wholesale-ready product data.

STRATEGIC BUSINESS UNITS & GLOBAL PROJECTS

Expanding Our Horizons: Innovative Solutions for Humanity's Future

At ARV Global Holding, we are dedicated to staying at the forefront of a rapidly changing world. By continuously evolving and updating our services, we provide professional, practical, and modern solutions to meet today's most pressing needs—from climate-related disasters and fire emergencies to the global housing crisis and advanced healthcare technology.

01. DISASTER MANAGEMENT & EMERGENCY RESPONSE

Specialized solutions for climate adaptation and high-risk fire scenarios.

Flood & Storm Protection: Advanced, rapid-deployment mobile water barriers designed to protect critical infrastructure against rising sea levels and extreme weather events.

EV Fire Suppression: Specialized ecosystems for Electric Vehicle (EV) fires, including cooling blankets, remote-controlled intervention units, and containment pools.

Centralized Safety Solutions: High-durability response cabinets and professional PPE designed for industrial and municipal emergency units.

Official Resource: www.waterkering.net

02. SMART MODULAR HOUSING & LIVING SOLUTIONS

Addressing the global housing crisis with sustainable and modular architecture.

Smart Capsule Homes: Innovative, sustainable, and eco-friendly modular housing units designed for modern living.

Alternative Care Housing (Mantelzorg): Specialized solutions for the housing crisis across Europe, specifically designed for senior citizens or those living independently who require a safe, compact, and high-quality environment.

Eco-Integration: Homes equipped with solar energy systems and smart-living technologies to ensure a low carbon footprint.

03. AI-POWERED HEALTHCARE & MONITORING SYSTEMS

Protecting the vulnerable through advanced sensor technology and artificial intelligence.

Smart Companion Systems: Developing AI-supported radar and sensor technology for senior care centers and individuals living alone.

Fall & Vital Sign Detection: Privacy-focused monitoring that alerts emergency units and relatives instantly in case of an accident or change in vital functions.

Specialized Dementia Care: Advanced "smart room" sensors that trigger alerts when patients leave their beds or rooms unassisted, ensuring 24/7 safety without intrusive cameras.

Integrated Communication: Smart wellness interfaces that provide a direct voice and data link between the individual and their support network.
