MOTORIZED TV LIFT

ARCHIMEDE

MOTORIZED TV LIFT

A TV lift is an ingenious device designed to optimize space and improve the aesthetics of home or professional environments.

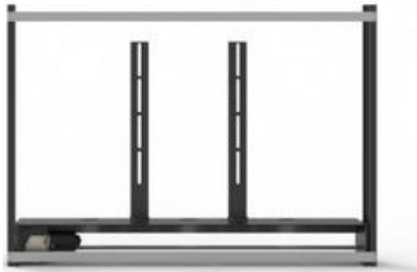

The design of a TV lift is generally elegant and discreet, often integrated into furniture such as wardrobes, beds or wall units, allowing the television to disappear when not in use. Operation is via a motorized system that raises and lowers the television with a simple remote control, ensuring a smooth and effortless user experience. Convenience is one of the biggest advantages of these devices, as they allow you to save space and maintain a clean and tidy appearance of the room. Furthermore, TV lifts can be particularly useful in bedrooms, living rooms and offices, offering a practical and modern solution for managing spaces and technologies.

DISCOVER OUR COLLECTION...

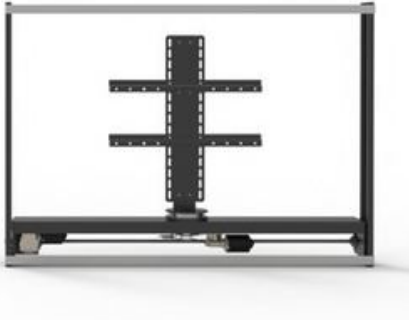

ARCHIMEDE SERIES

ARCHIMEDE

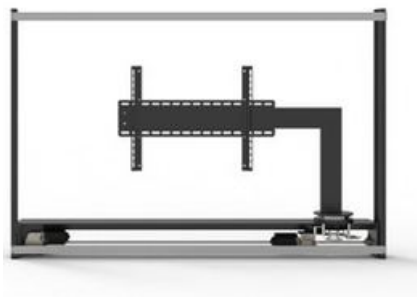

Archimede is our main cabinet tv lift: from a 32 to 98 inches tv size, Archimede will rise together with tv from your furniture, hidden inside it when is off. If you're planning to realize a cabinet, we'll work to project a tailor-made tv lift which fits perfectly inside it.

ARCHIMEDE ROTOR

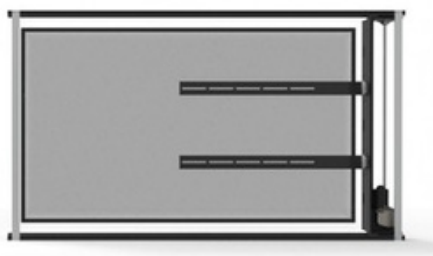

In addition to a rising up function, we can upgrade a tv lift with a 350° rotational movement. **Archimede Rotor** is a special pop up tv that once it had risen up you can manage a right/left rotation with a small remote control.

ARCHIMEDE BANDIERA

If you'd like to have an integrated system that rise and rotate but you have a wall behind tv, **Archimede Bandiera** is the perfect solution. Like a flag that change its direction, Archimede Bandiera rotate from one side with an angle of 90°, you should decide before if you need a right or left opening.

ARCHIMEDE LATERAL

In a recessed wall we designed **Archimede Lateral**, that comes out from the side of the wall with a horizontal movement for tv up to 65".

PREMIUM COMPONENTS

By choosing quality components and high performance motors we realize an effort and reliable products durable over the time, completely silent that support 100 kg weight.

All parts are made with max. precision, assembled between in a perfect combo, trying to extract performance and saving space finding the right fit.

Thanks to our engineered software applied with the control board, all the movements and functions can be managed by a small remote control quickly and easily

APPLICATIONS

Installing a TV lift in different areas of the home offers numerous advantages and a great deal of freedom of choice to improve the aesthetics and functionality of the space.

In the living room, a TV lift integrated into a piece of furniture allows you to maintain a clean, minimalist design, hiding the TV when it is not in use and freeing up space for other pieces of furniture. In the kitchen, having a TV lift can be particularly useful to optimise space and follow recipes or watch programmes while cooking, without having a bulky device on the counter.

APPLICATIONS

In the bedroom, a TV lift offers the luxury of watching television from the comfort of the bed, with the option of hiding it for a more relaxing and uncluttered environment.

Finally, the integration of the TV lift within a wall is an elegant and modern solution, ideal for those who want cutting-edge architectural design while maintaining functionality. The freedom of choice in positioning a TV lift allows you to adapt the technology to your needs and aesthetic preferences, enhancing the efficiency and harmony of your living space.
