

# POLYFORM - THE ORIGINAL

Inflatable buoys and boat fenders

NEW: Partly made with bio-sourced raw materials  
**Carbon footprint reduced by 8%**

Multiple rib-reinforced rope hold  
**Highest breaking strength**

Rope hold solid right through  
**Will not tear!**

UV resistant and cold flex plastic  
**Suitable for all climates and conditions**

Sturdy, uniform wall thickness  
**No splits, cracks, or weak points**

Valve with half a turn screw,  
and integrated non-return flap  
**Easy inflation and adjustment of air-pressure**

High pressure injection molded rope hold  
**Adding extra strength and durability**

Unique patented production  
**The most consistent quality available**

Extra flexible body material  
**High energy absorption and effective fendering**

The valve is an integrated part of the rope hold - no glue used!

**Valve stays in the product under all "strains"**  
**Does not pop!**

VALUE WITH  
QUALITY

THE PROFESSIONALS' CHOICE SINCE 1955.  
BUOYS, FENDERS AND FLOATS - MADE IN NORWAY.

# Being the original means being the first. Always.

Polyform AS was established in Aalesund, Norway in 1955 and is the originator and first company in the world to produce inflatable, all-plastic net buoys and fenders. All products are still manufactured at our facilities located at the north-western coast of Norway, where we benefit from being part of one of the world's most innovative maritime environments.

Through a well-established net of distributors, the products are sold all over the world under the trademark Polyform®.

In 2021 we launched our Sustainability Roadmap and Green Concept; an environmental commitment and all our measures for a more sustainable production and reduced environmental footprint.

**The same unique quality with  
a reduced environmental footprint**

## World's First Inflatable Buoys and Fenders with a Reduced CO2 Footprint

Polyform inflatable buoys and boat fenders are now the **first in the world to feature a reduced CO2 footprint.**

Made partly with bio-attributed materials, substituting fossil feedstock with renewable biomass, adhering to mass-balance principles, reducing carbon footprint by 8%.

This applies to all our inflatable PVC products; boat fenders, buoys and mooring buoys,

Our supply chain is certified by the Roundtable on Sustainable Biomaterials (RSB) and ISCC PLUS.
