AIRFLOAT COVERS

Our Airfloat Floating Cover offers a leading solution for large tanks, designed with an innovative, flexible membrane for easy deployment. It helps prevent evaporation, inhibits algae growth, and protects stored water from external contaminants. Suitable for irrigation, industrial and waste applications.

Not recommended for heavy snowfall and high winds

KEY BENEFITS

Effortless Installation

Light weight and unrolls easily for a quick, hassle-free setup

High Durability

Engineered to withstand UV exposure and chemical environments

Superior Evaporation Control

VapourGuard™ technology prevents up to 98%+ water loss

Algae & Light Control

Black underside blocks sunlight to inhibit algae

larger sizes

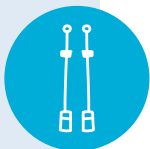

INSTALLATION & MAINTENANCE

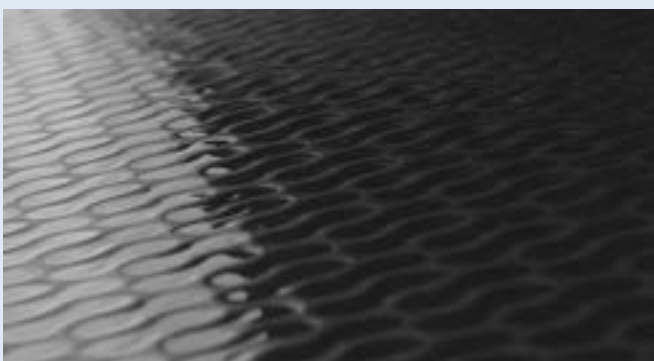

Installation

Install during dry weather for best results

For large covers additional tubing is recommended

Maintenance

Inspect monthly for tension, debris, or wear

Cover must not be walked on

Use safety signage and restrict access

Overflow Integration

Overflow pipes can be sealed flush with slope face

Rainwater harvesting version includes micro-perforations

TECHNICAL SPECIFICATIONS

Material

VapourGuard™ – dual-extruded polyethylene with GeoBubble™ technology

Thickness

540 microns total (300 micron bubble film + 240 micron black backing)

Weight

~520 g/m² ±10%

Sizes Available

Custom-made for specific applications

Optional Additional Tubing

To reduce the risk of the Airfloat cover lifting or shifting in windy conditions, an optional perimeter tubing system is available. This involves a continuous loop of flexible tubing that is fitted around the outer edge of the cover. Once filled or weighted, it acts as a ballast, helping to keep the cover firmly in place on the water's surface.

Adds stabilising weight to anchor the cover securely

Can be factory-fitted or supplied as a retrofit option

Particularly beneficial for larger tanks
