

DULCODOS compact (DSKb)

Modular like a construction kit and supplied ready for connection.

Innovative relief return line

Innovative relief return line. Overflowing medium is collected in an overflow vessel. Additional acid vapour separator absorbs strong-smelling vapours.

Broad chemical resistance

A large selection of piping materials, seals and adhesives allows the use of diverse dosing media. Thus, depending on the respective configuration, media such as HNO_3 and H_2SO_4 can also be used.

Smart splash guard

Removable and easy to handle, this guard improves safety during the metering process by being quick to access and user-friendly.

Numerous options are available,

such as priming aids, an overflow vessel with acid vapour separator, flush functions, leak sensors and much more besides.

Compact assembly frame

Compact skid with improved rigidity and stability, made either from eco polypropylene or stainless steel. Prepared for flexible suction-side connections. Either on the front or side.

Special media outgassing

A siphon vessel with riser pipe allows any gas bubbles forming at the vessel cover to be separated off. Peroxides, for example, can then be metered.

Genuine sigma metering pumps

Huge choice of motor-driven metering pumps of between 17 and 1,040 l/h as basic or control types with unique multi-layer safety diaphragm as well as optical rupture indicator.
