

# Floor Traffic Lights

## Eco-Friendly Ground-Embedded Pedestrian Signals

By utilizing a hybrid solar auxiliary power supply, daytime power consumption of the ground-embedded pedestrian signal display unit is reduced by more than 40-80%.

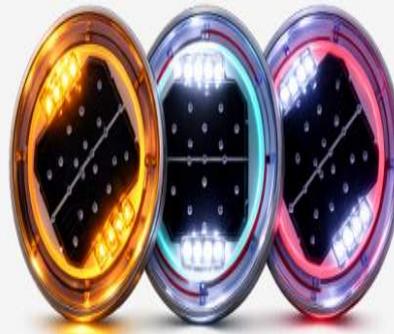

# Road Sign Disease

## Road Boundary Lighting System

Provides safety guidance for road lanes, centerlines, highway entry and exit ramps, and roads with potential hazards.

Engineered to enhance nighttime visibility and driver awareness, these luminous road markers deliver critical directional information exactly where it's needed most.

# STL

An innovative technology company dedicated to advancing the future by prioritizing human safety, ongoing research, and transformative innovation.

Let's work together and secure your business with the best technology services!

Smart Traffic Signal Light

Safety for one,  
happiness for all

# Our Vision

To become a trusted technology partner that helps companies innovate and grow in the digital world.

Smart Traffic Signal Light

## Traffic Lights

### LED Signal Systems

Designed with a strong focus on enhanced durability, providing a semi-permanent service life.

Our traffic light systems combine rugged construction with state-of-the-art LED technology, ensuring consistent performance in all weather conditions and demanding environments.

## Underwriting

### Floor-Integrated Modular LED Lighting System

A modular, floor-integrated lighting solution designed for dynamic environments, delivering vibrant full-color RGB illumination in any setting day or night.

- Advanced RGB LEDs for perfect day & night performance with exceptional color accuracy and vibrancy.
- 15 × 15 pixel high-resolution display per block delivers crisp, clear imagery at any viewing angle.
- Engineered with high-strength materials capable of supporting full vehicle weight for all environments.
