

# BIO|CONTROLLER

## Crop management system for greenhouse farming

Plant condition monitoring and history of all inputs in one place. Collect, store and analyze the information in one click!

### **BIOCONTROLLER IS A SOLUTION FOR CROP MANAGEMENT IN GREENHOUSE**

Control and monitor each plant, schedule plant treatments against pests and diseases, collect and analyze data at the plant level. Things that used to be only on paper or in your memory now saved and analyzed digitally. Use this data to quickly identify deviations and track the spreading of diseases and pests.

# Crop management system for greenhouse farming

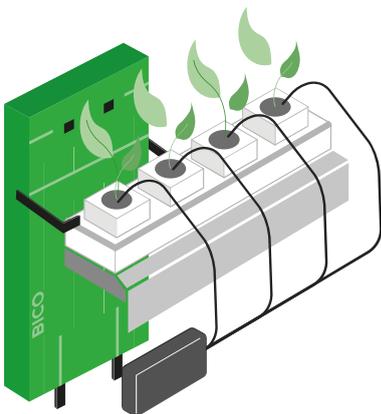

## CROP MONITORING

Control and monitor each plant, identify pests and diseases. Schedule plant treatments and collect data at the plant level using our on-field mobile app.

## COSTS CONTROL

Control the consumption of inputs, manage your storage, control the expenses of materials, explore analytical reports.

## EQUIPMENT

Control irrigation, polination and climate. Add wireless sensors to analyze the quality of bumblebee pollination, manage irrigations and climate.
