

EPS Box Lite

The future of parking is already at your gate

Make your existing barrier smart
in 1 day with a modern mobile app.

Cloud-based parking management without
employees?

From now on, your barrier should work for free
instead of employees.

Remote control? NFC Passes? In 2025?

Gates, barriers opened with access cards, phone calls or cards can only open and close. They do not provide additional features, they are not scalable, they are not measurable, they are not convenient, they do not generate revenue.

No data, no feedback, no control, no return.

EPS Box Lite replaces all with a modern, application-based system in which all operations are automatic and can be monitored.

What does this mean for you?

- ✓ Less administration – no more lost remote controls, access cards.
- ✓ Flexible use of parking spaces – one parking space can be used by several cars, but only one at a time. You decide!
- ✓ Real-time parking list – check who is using the parking lot at any time.
- ✓ Automated payment – guests can also pay in the app.
- ✓ Increasing revenue – the parking lot starts to finance itself and make a profit.

**All this with your existing barrier
– no need to buy a new one.**

How does it work?

We connect the EPS Box Lite to control the existing barrier

Customers download the application

Entitlement management, login, exit and payment are automatic

Access management:

Finally a system that you control

Entry with separate rules, according to your decision: one for season ticket holders, one for the guests and another for the employees

By license plate number, time period, or event

Fully digital, web-based interface

Just like the access control system of a professional office building or mall – only significantly cheaper.

The mobile phone is the key to the parking lot

– and at the same time the entrance to smart parking

Users are granted access via mobile phones

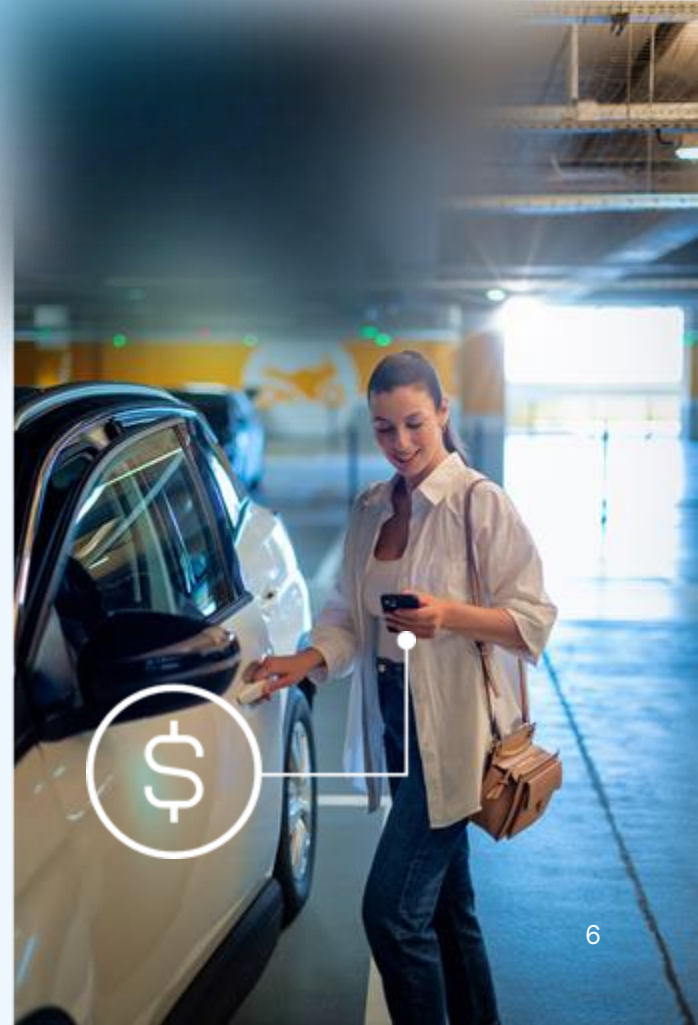

Identification, opening gates, payment:
everything is done through the application

No more abandoned cards, no personal
handover, no ticket printing

Everyone uses their own phone – this is the future.

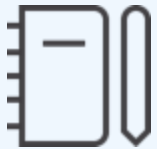

Web control, real-time transparency

Anytime you can open and close the barrier from anywhere, all you need is the internet and authorization

See who's in and when they went out

All events are logged, timestamped, retrievable

It's not just access control – it's control.

Automatic license plate recognition:

a contactless experience (option)

With LPR camera, access is fully automatic

No app launch, no waiting

The system recognizes the license plate number and opens the gate according to the predefined authorization

Guests get a VIP experience, and you get returning customers without having to work, the system does it for you

Mobile payment and time-based pricing

Guests can be registered via a QR code or license plate number

Based on your settings, the system will manage the defined free period(s)

After payment, automatic exit is granted.

The system can generate revenue from day one.

The existing barrier in a new role: service platform

- ✓ Guest parking → a new source of revenue
- ✓ Dynamic pricing → better utilisation of parking spaces
- ✓ Multiple parking lots → unified management in one system
- ✓ Automatic access → greater guest satisfaction
- ✓ Cloud-based system → remote control from home

You don't have to replace your existing devices – the EPS Box gives it a new meaning.

Scalable, future-proof system

Expandable with LPR cameras, payment machines, guest management

Pro features can be upgraded on the same basis anytime

The modern mobile app immediately provides a premium experience

Start with Lite, grow to Pro. The foundation is already there.

Stable background, professional team, software that has been working stably in different parts of the world for years

EPS Global Zrt has been providing parking solutions in many cities in several countries around the world since 2012.

Our continuous developments and proprietary software solutions make us one of the most dynamic players in the market.

Our software in 2024 processed

- > **9 million** parking incidents,
- > **1 million** license plate recognitions,
- > **3 million** barriers openings
- > **1 million** payment transactions.

The gate is already open. When do you enter it?

EPS Box Lite is not just a technology – it is an **instant tool** to:

increase your revenue,

simplify and make operation cheaper,

provide a better experience for employees and paying guests.

Don't wait to digitize – implement it today and it could be generating money for you tomorrow.
