

Kings of carbon

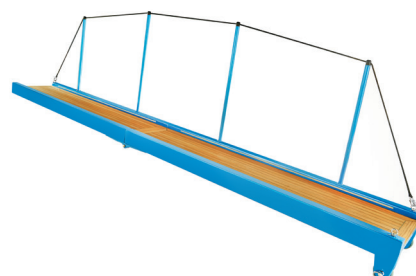

**Multiplex offers high end solutions for the biggest yachts afloat.
Their carbon boarding systems are second to none.**

Making things simpler, lighter, easier and more convenient is part of the philosophy of multiplex. Founded in 1986, the creative think tank has developed swiftly but surely to become a global market leader in the field of boarding systems, offering top-quality products based on carbon fibre – gangways, ladders, railings, fender launch systems and awnings in the most exclusive design. As well as being supremely stylish, they have the properties that are needed on all yachts – they are lightweight, easy to handle and stow away and moreover they are absolutely rustproof and highly resistant to environmental influences such as salt water. Behind the scenes, a team of nearly 20 people works tirelessly in the R&D and design departments and, of course, in manufacturing. Custom solutions are not an exception at multiplex, but the standard. Designed and parameterizable with high end software, multiplex products are a guarantee for highest quality and absolute fitting accuracy. No other manufacturer of carbon equipment for superyachts offers this combination of services. This is one of the reasons why multiplex is considered the world market leader in this segment. Among other things, multiplex has equipped 80 of the world's 100 largest motor yachts to date and supply all the major shipyards around the globe.

MULTIFLAP

The multiflap is light, stable and resistant to deformation. It is also weather-proof, which means that neither wind nor seawater can cause any harm. With a weight of 4.4 kg per metre and a quick, simple fixing system, it can be mounted and dismantled by a single person. The practical hinge system keeps storage space to a minimum.

SUN AWNING SYSTEM

Easy installation and less weight combined with elegant design let the sun awning system become a product which enjoys great popularity. Each sail is individually hand-made so it will suit perfectly the vessel's outline. Miscellaneous paintings of the poles, several types of sailcloth, loud speakers and lights can personalize the systems according to taste.

MULTIGUARD

The multiguard system is a railing made from pure carbon fibre, designed and shaped according to a client's individual requirements. Despite its low weight the multiguard system can withstand a lateral pressure of up to 100 kilos and has been certified by Lloyds Register. As is standard with multiplex, the system is available in a free choice of colours with worldwide service.

MULTIFENDER

Based on the multifender modular component system, all multifender systems are produced according to individual requirements. This means that we tailor the multifender to all imaginable conditions so that it can be used in absolutely every location. With responsible utilization, the multifenders are basically designed for vessels weighing up to 12 tons.

MULTISTAIR

The multistair can be used for access over the side, or over the stern, directly into the cockpit. It can be swung 90 degrees from a fully horizontal to a fully vertical position, with all steps automatically aligning in parallel with the surface of the sea. The use of carbon fibre and stainless steel ensures 100% corrosion resistance.

MULTILADDER

The multiplex multiladder system is based on the multiplex typical carbon fibre compound construction system. The lightness of this ladder construction enables an easy and quick assembly and dismantling. The use of carbon fibre and stainless steel ensures 100 % corrosion resistance. Multiplex swim ladders are also characterised by optimum ergonomic features and need less space for stowage.
