

VoltSense
HUB + AI Guard

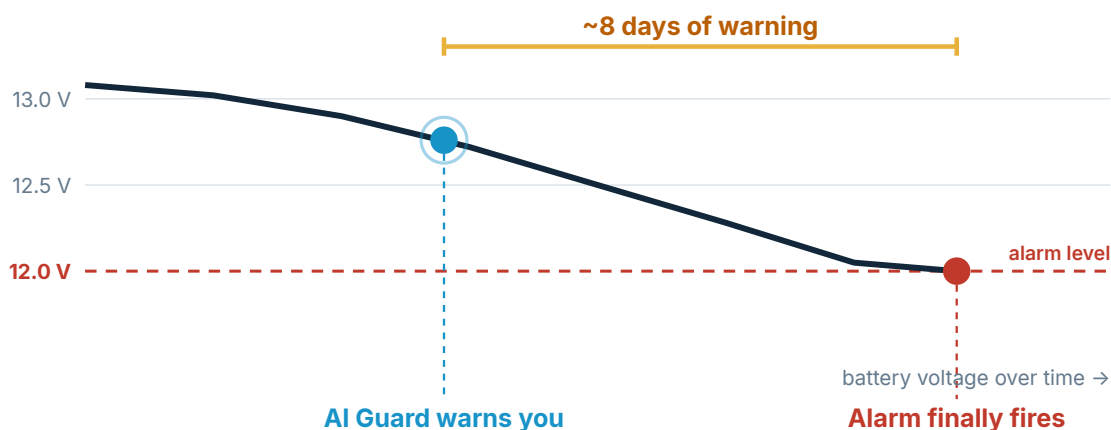

METSTRADE · 17-19 NOV 2026

FOR MARINAS · YARDS · SERVICE COMPANIES

Your HUB tells you when a boat breaks. AI Guard tells you **before** it does.

VoltSense turns the data your boats already send into a daily, plain-language warning — so you catch the slow problems (flat batteries, failing chargers, creeping damp) **days before an alarm ever fires.**

One battery, one winter — a reactive alarm vs. AI Guard

Predict, don't react

Catch slow faults days early, not at the floor.

Plain language

A daily one-line health note per boat. No dashboards to decode.

Sell it as a service

€2 / boat / month. Resell monitored care to owners.

No new hardware

Runs on the VoltSense data your fleet already sends.

VoltSense
HUB + AI Guard

Predict · Prevent · Prove

One platform, two jobs

VoltSense HUB

See and manage every boat in your fleet — real-time monitoring, maintenance, alerts and reports, per operator.

AI Guard

Predict the slow problems before they happen and hand owners a report that proves the care — per boat, €2/month.

How it works

1

Your devices send data

Nothing new to install — your VoltSense units already stream voltages, temperature, humidity and bilge activity.

2

AI Guard analyses daily

Once a day it reads each boat's trend, projects "days-to-critical", and writes a plain-language note in your language.

3

You act early — and prove it

Fix the charger before the bank dies; hand the owner a season report that shows exactly what was watched.

What AI Guard watches

Battery health & charging

Cabin humidity & damp

Bilge activity trend

Days-to-critical estimate

AI Guard is a **predictive aid**. It analyses trends once a day, cannot detect sudden events (impact, flooding, theft), and does not replace real-time alarms, physical checks or certified safety equipment.

Simple pricing

HUB Starter €35 / mo

HUB Standard €75 / mo

HUB Unlimited €250 / mo

AI Guard add-on €2 / boat / mo

First boat free on Standard & Unlimited

All prices + VAT.
