

## Metro Marine Joins Garmin OneHelm™ and Apple iOS Ecosystem

Metro Marine is proud to announce its official approval as a Garmin OneHelm™ partner and acceptance into Apple's iOS developer program. These dual milestones allow Metro Marine's Multi-Function Display (MFD) app to be fully integrated into Garmin's helm control system and available on Apple's App Store, bringing unified lighting control to the fingertips of captains and crew.

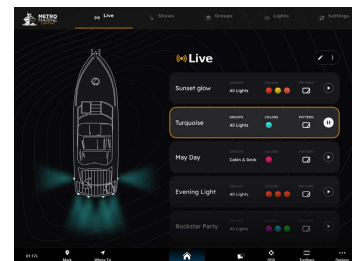

Metro's innovative MFD app enables real-time control of its patented underwater lighting systems directly from Garmin multifunction displays, eliminating the need for separate control panels and enhancing helm efficiency. With iOS integration, users can now also manage these systems remotely from iPhones and iPads.

What sets Metro Marine apart is its patented UVC and dry gas technologies. The UVC system eliminates biofouling from the lenses on Metro's underwater lighting fixtures, while its dry gas assembly process prevents internal condensation, ensuring long-term clarity and reliability. These breakthroughs dramatically reduce maintenance and enhance performance in any marine environment.

With over 30 years in marine lighting innovation, Metro Marine continues to set a new standard in performance, durability, and connectivity.
