

shWOWer — The Carbon Fibre Deck Shower, Reinvented

shWOWer is a lightweight sleek carbon fibre shower designed to be mounted on deck via a practical bayonet fitting. It elevates the onboard shower experience by solving all the typical issues of traditional hose-and-faucet deck showers.

Whether on a 40-foot cruiser, an 80-foot yacht, a sailboat, catamaran, motor yacht, or performance RIB — the **shWOWer** fits perfectly anywhere, thanks to its range of available sizes.

The more compact models take advantage of the height difference between deck and mounting levels, allowing for a smaller, easy-to-store unit when stowed below deck. Each **shWOWer** comes with a soft storage bag, while wall clips can be ordered separately.

The standard bayonet fitting (commonly used for deck-wash systems) is compact, flush-mounted, and available on request. It can also function as originally intended, using the included fitting. A water mixer — not included but available on request — should be installed inline before the **shWOWer** handle, which operates simply as an on/off valve. Retrofitting to an existing system is straightforward: keep your old hose-and-faucet setup and just add the new pipe for the **shWOWer**.

More than just functional, the **shWOWer** turns a long-unchanged utility into a true design statement.

Crafted from varnished carbon fibre with UV-resistant fittings, every detail exudes quality. Standard models feature polished AISI316 stainless steel rings for a refined finish. Customisation options include coloured nylon rings and even your boat's name or logo engraved on the shower head (extra charges apply).

The head comes in two sizes, S and M. The first being 8cm long, used when the bayonet fitting can be installed relatively close to the final showering position. The larger one, at 12cm long, to be chosen when the distance between the user and the base is wider. Eventually, the water jet has a 35 degrees angle. Head components on both models are designed to be taken apart for regular maintenance.
