Systems™

## MPS.CG50

The **MPS Conductive Grease** comes as an easy to apply 50ml (1.7fl oz) syringe. This corrosion resistant and high temperature electrically conductive grease is designed to maintain excellent electrical connections in harsh environments.

Ideal for all anode, bonding and electrical connections where maintaining a perfect connection is critical. Will keep metal free from rust and corrosion within connections where impedance can degrade a connection.

## KEY FEATURES

- 1 Corrosion resistant.
- 2 Maintains electrical and bonding connections.
- 3 Ideal for a range of connections where corrosion free and electrical connection is critical.
- 4 High temperature rating (200°C/40°F)
- 5 Syringe and tip included for no mess, accurate application.

## IDEAL FOR

- Anode connections - studs, outdrives and hard mounting
- Bonding and electrical connections
- Battery and electrical terminal connections
- Cooling system anode connections

Will keep metal free from rust and corrosion within connections where impedance can degrade a connection.

## COMPATIBILITY

Not for specific engine

## SIZE

1.6fl oz (50ml)

*"I can say after thoroughly testing the MPS products first hand that they deliver the results they claim and have saved me time and money in maintenance and repair. MPS have also eliminated any worry about the effects of corrosion with my vessel. I see so many boat owners take the same traditional action every year with limited success. I now have no problem recommending, selling and installing MPS corrosion protection."*
