## About Delphy

- ✦ High-tech facilities
- ✦ Expertise
- ✦ Innovation to application
- ✦ Partnering R&D in Horticulture

Discover how we grow your practice to the next level:

Delphy Improvement Centre is your partner for research, knowledge development and demonstration in greenhouse horticulture. In our state-of-the-art greenhouse facilities, we develop, test and demonstrate integral cultivation concepts and greenhouse technologies, contributing to sustainable and profitable greenhouse horticulture worldwide. We combine practical and innovative research knowledge with data-driven cultivation management and integrate it with spot-on cultivation advice. Cultivation departments with various surfaces and systems, as well as climate cells and Phytotrons, enable practice-oriented research. We conduct research for and with partners such as grower groups, suppliers and private clients. Our portfolio covers several crops and,

in addition to variety trials, include themes, typical to the sector and closely tailored to growers' needs. Besides intensive supervision of the research by clients and supervisory committees, the IC also transfers knowledge during knowledge days and via articles in trade journals and social media.

## We make Growers Better
