Perspective

As fresh water becomes increasingly scarce, we are turning to the ocean as an endless source of water.

Using only solar and wind energy, we're able to create the most refreshing water filled with natural minerals.

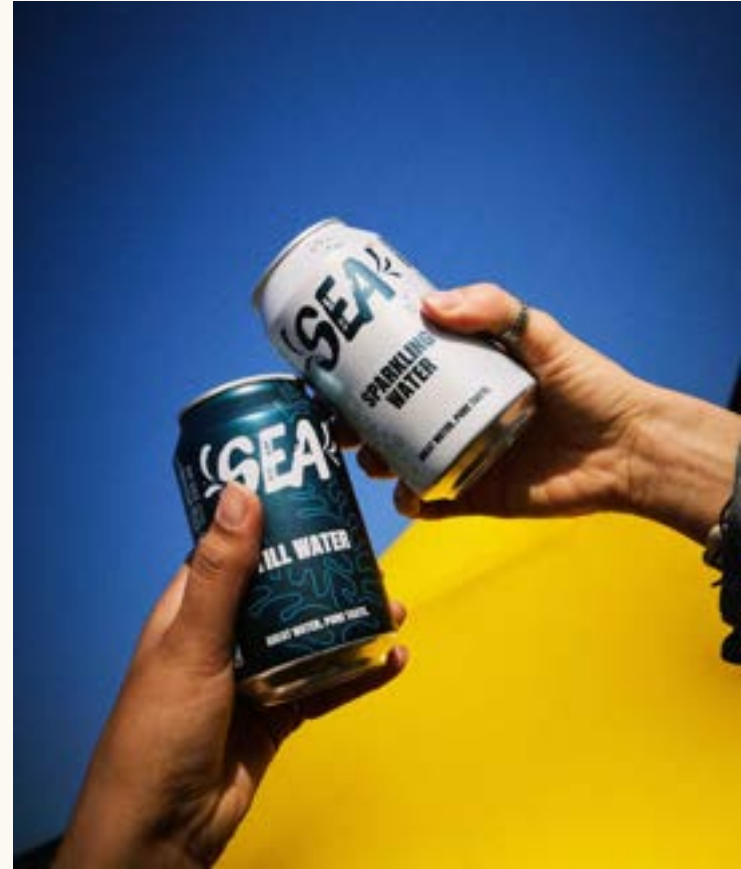

Our system

Our compact desalination systems are modular, scalable and 70% more energy efficient than conventional desalination systems. With this innovative set-up, we produce high-quality drinking water, only powered by solar and wind energy. Anywhere in the world.

We are committed to environmentally friendly production, ensuring that our brine stays within the natural fluctuations of the ocean.

Returnable bottle

Instead of being thrown away, our bottles are meant to stay in circulation. They're returned, washed, refilled, and served again.

Endlessly recyclable

Aluminum cans can be recycled into almost exactly the same product without loss of quality, while the quality of the recycled plastic decreases after each recycling cycle.

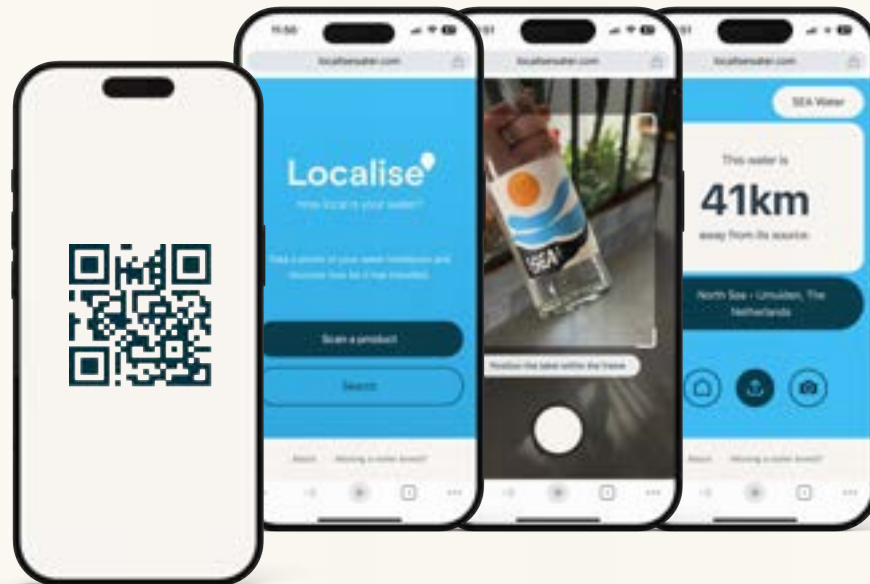

Localise app

As part of our 'Serve local' campaign, we built the mobile web app 'Localise' to make the invisible journey of bottled water visible. Every can or bottle has a source, and often it's much further away than you'd expect.

Localise is an initiative dedicated to rethinking how we drink water in a world where fresh water is under pressure.

Partnerships

Water is essential for almost all consumer products. With the increasing global water scarcity, manufacturers are realizing that the availability of fresh water can become a serious problem.

Significant investments are being made in reducing, reusing and recycling water. In addition, alternative water sources, such as the ocean, are being considered.

Jopen Brouwerij is the first brewery in the world to brew their session IPA 'Life's a Beach' with solar powered desalinated seawater.

Partners for life

We are working with partners that can enhance our positive impact and can reach millions by raising awareness for the beauty and fragility of our oceans, like **ReefSystems**.

Together, we want to show that our oceans can remain bountiful, given we take care of them in return.

SEA

The taste of the water is pure and refreshing. It is the best choice for your health and the environment. SEA is a natural mineral water from the mountains of the Jura.
