# Meet MTN

MTN is the world's leading satellite and 5G+ network operator, delivering over four decades of innovation and award-winning expertise in maritime technology. Serving 7,000+ customer locations and enabling millions of people to stay connected globally, we provide fully integrated, end-to-end connectivity solutions.

As an official Starlink and OneWeb reseller, we combine LEO, GEO, and 5G-4G/LTE technologies to deliver high-capacity, low-latency coverage across global vessels. Our in-house team oversees every stage, from system design to installation and 24/7 monitoring, delivering custom network solutions with rapid global deployment. This one-stop approach ensures captains and crew maintain reliable, high-speed communications for operations and guest experience.

# Engineering Excellence At Sea

Exclusively by MTN, our patent-pending Performance Mounting System is maritime-grade and precision engineered for the new 2025 Starlink Performance Antenna. Its sleek fiberglass design holds a fixed eight degree tilt to prevent water pooling, maintain peak reliability, and discreetly house an integrated 5G-4G/LTE antenna for backup connectivity, all in a form that blends seamlessly with any yacht.

● **KEY FEATURES**

Enhanced performance with air intake for heat dissipation & drainage

Marine-grade fiberglass body with aluminum frame

Integrated modem, load balancer and 5G-4G/LTE antenna

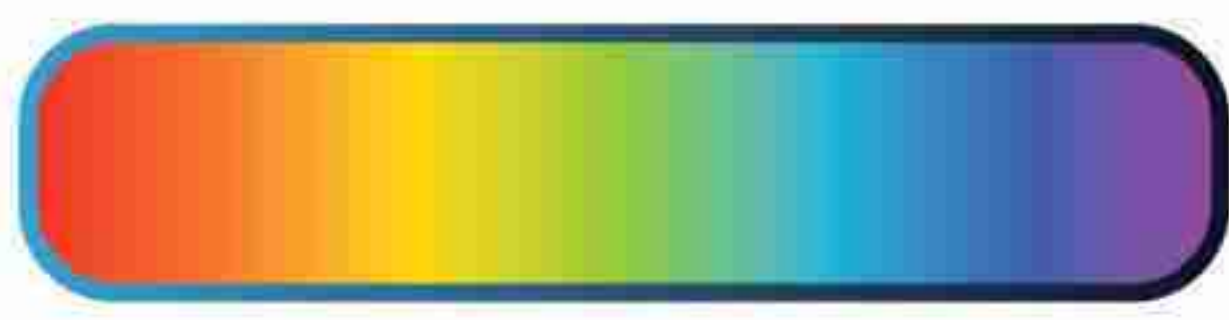

Rear access panel for quick serviceability

Compatible with direct or pedestal mounting

Custom Colors Available

Exact Color Match for Your Vessel

# High-Speed Internet

Experience connectivity at sea without compromise. MTN delivers gigabit-class speeds with built-in redundancy, ensuring uninterrupted calls, streaming, and onboard systems—no matter your location or conditions.

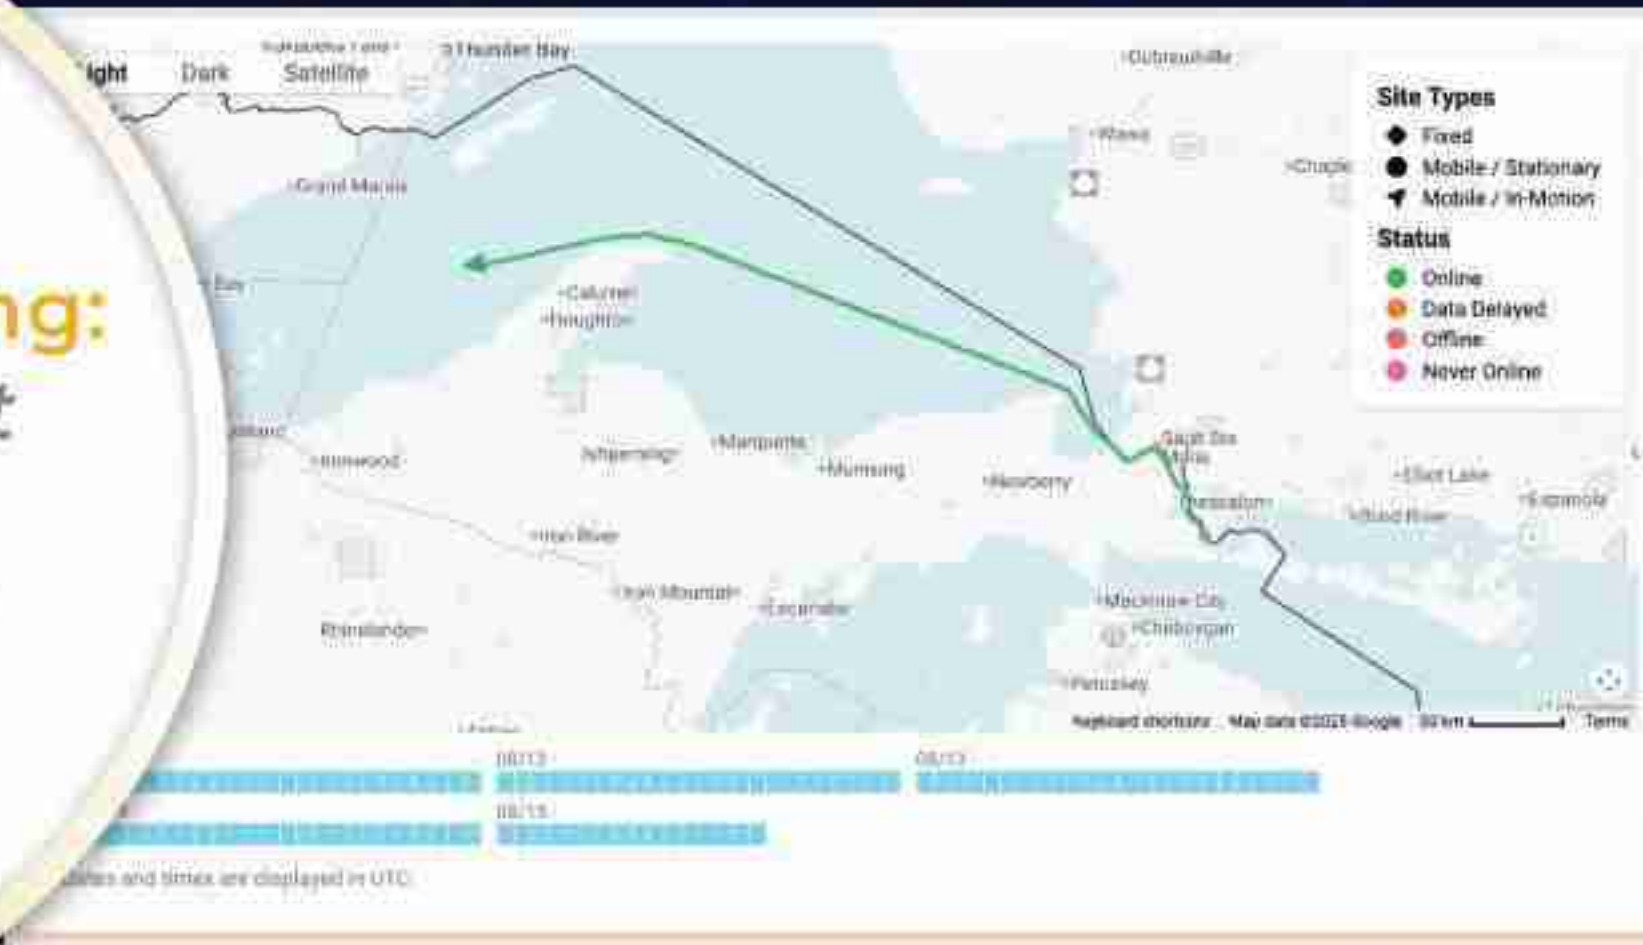

# Performance you can count on

- Starlink & OneWeb Official Reseller
- Fully custom plans available
- Redundancy and automatic failover
- Low-latency connections
- Unlimited VoIP calling
- Prioritized data routing

# MTN Customer Portal

A unified, real-time platform for complete visibility and control of your vessel's connectivity.

**Live Vessel Tracking:**  
Monitor the exact location of your yacht or fleet in real time.

**Network Topology View:**  
Access live network diagrams, including equipment health and site online/offline status.

**Fleet Management:**  
Centrally oversee and manage multiple vessels from a single dashboard.

**Bandwidth Analytics:**  
Track daily and monthly data usage for precise capacity management.

**Integrated Support:**  
Submit, track, and manage support tickets directly through the portal.

Get Support

**Comprehensive Network Monitoring:**  
Review detailed telemetry and performance metrics instantly.

**Document Repository:**  
Securely access contracts, installation reports, and other critical documentation.

**Remote Speed Testing:**  
Validate connectivity performance whenever you need it.

# Expert Support Wherever You Operate

With headquarters in Florida and offices in Spain, Brazil, Norway, France, Dubai, Greece, UK and Monaco, MTN delivers rapid, in-house service worldwide. We maintain inventory in every location for faster installations and quick response times. Our dedicated MTN engineers know your vessel and systems, ensuring seamless support anywhere you operate.

Preconfigured hardware for immediate deployment

In-house global engineering team with maritime expertise

Multilingual support staff for 24/7/365 assistance

Three Network Operation Centers (NOCs) in Spain, Florida and Dubai

## Seasonal Flexibility, Personalized Service

MTN tailors connectivity to your yacht's changing needs, whether hosting guests in peak season or in dry dock. Your dedicated account manager delivers proactive, white-glove support to ensure seamless service year-round.

### Peak season:

Scale bandwidth and data consumption for maximum performance when you need it most

### Data Pooling:

Share your data allotment across multiple yachts for efficiency and value

### Fusion Bonding:

Merge multiple antennas into one powerful connection, combining satellite, cellular, and shore-based services for unmatched speed and reliability

### Dry dock:

Downgrade or pause service to reduce costs during maintenance periods

### Custom support:

Adjust protection levels and technical coverage to fit operations
