

ERP Business Software for Horticulture

Future-Proofing Horticulture Businesses

Optimize Finance, Sales & Operations with Agriware Software

Agriware ERP Software helps organizations **manage, automate, and optimize** business processes across all operations.

- Run operations more effectively with a **360° view** of all available data
- Achieve **more efficiency** across all operations
- Reduce labor & resource utilization**, with smart planning, apps, and AI-tools
- Align with **customers and supply chain**, integrating all data (EDI, IoT, and more).

What is ERP?

ERP (Enterprise Resource Planning) integrates key business functions—such as **finance, inventory, operations, HR**—into a single system, improving efficiency, data accuracy, and decision-making.

Tools to support everyday business

Core features extended for the needs of greenhouse growers & producers

- ✓ **Financial Management:** Integrate accounting, budgeting, and cost analysis for better decision-making.
- ✓ **Inventory Management:** Track plants, supplies, and materials in real-time with full traceability for sales.
- ✓ **Planning & Forecasting:** Get most out of resources, workforce, space utilization and materials.
- ✓ **Order & Sales fulfillment:** Streamline sales orders, deliveries, and customer management.
- ✓ **Crop Management:** Plan, monitor, and optimize crop production cycles from seed to harvest.
- ✓ **Delivery:** Streamline shipping with advanced tools for order picking, racking, detailed load, route planning

Agriware is built on Microsoft Business Central, the world's most widely used ERP system for SMB, extending its core features for horticulture needs.

Why Agriware ?

All-in-one Solution - Agriware brings finance, sales, and operations together in one connected system, serving as a central point for your daily processes.

Powered by Microsoft - Built on Dynamics 365, this tool is designed for horticulture to support complex growing and production processes.

Connected Business - Links production, sales, and inventory directly to financials while integrating with suppliers, customers, and logistics for seamless orders, invoicing, and e-commerce.

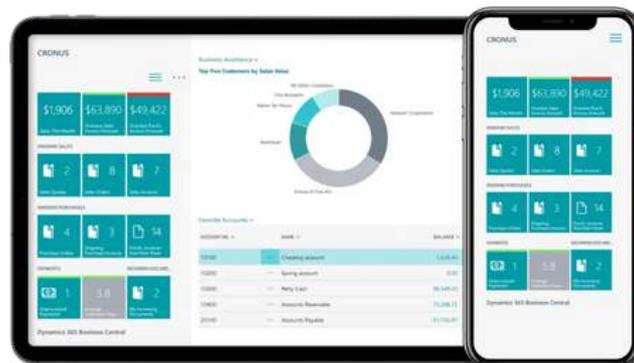

Mobile Accessibility - Agriware allows staff to log activities, monitor crops, and manage tasks remote with auto-sync to office.

As more industries adopt robotics, supply chain speed is accelerating.

The green industry can stay competitive by **connecting people, data, and technology.**

Be more efficient with integrated production and a connected work floor

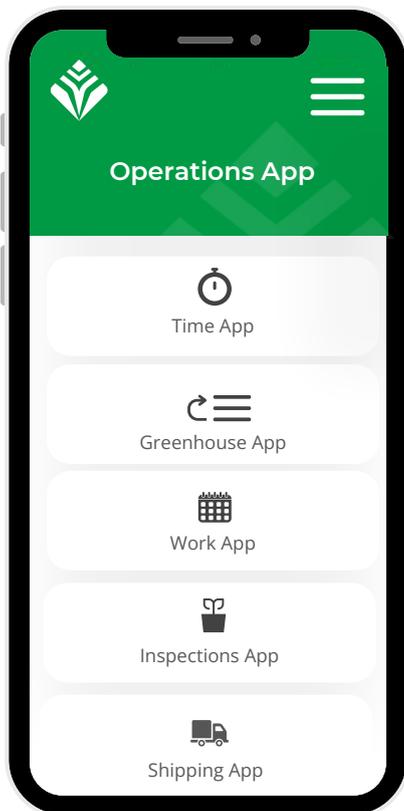

Fully Manage Your Operations Office and Field, Connected

Agriware 365 Operations connects your ERP to the field. Make plans in the office, carry them out in the nursery. Easy all-in-one apps mean no paperwork and full oversight.

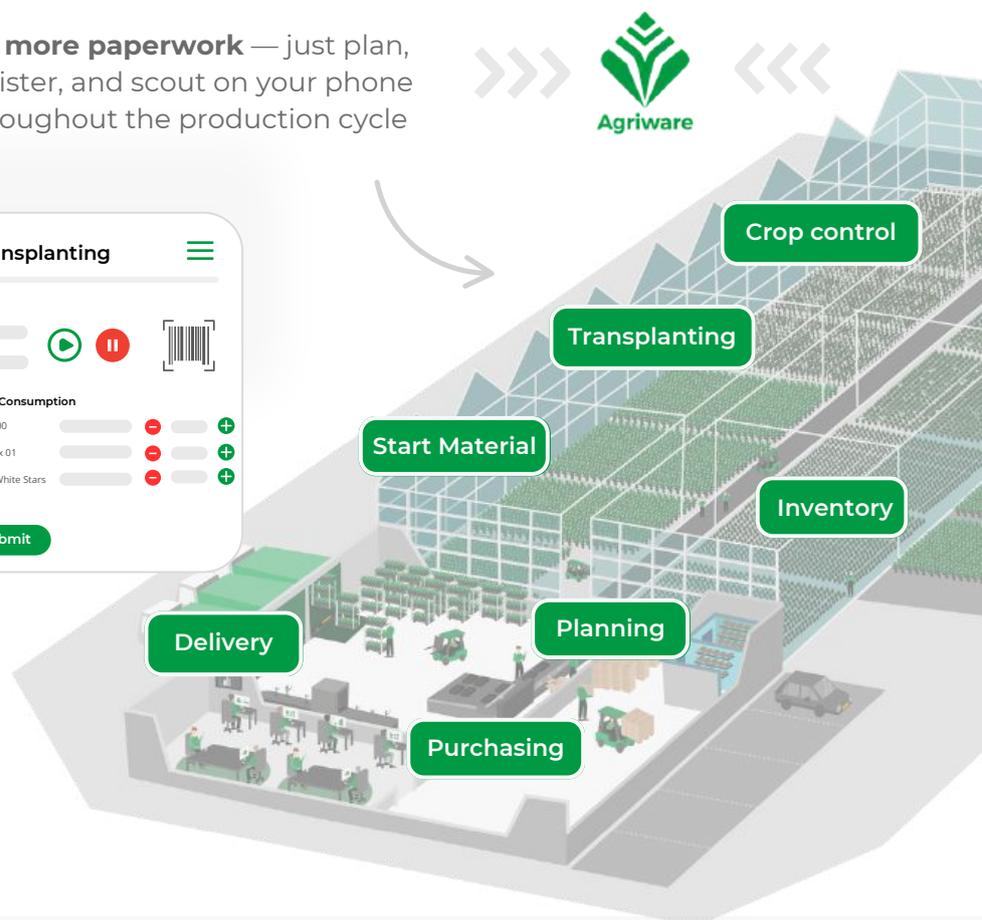

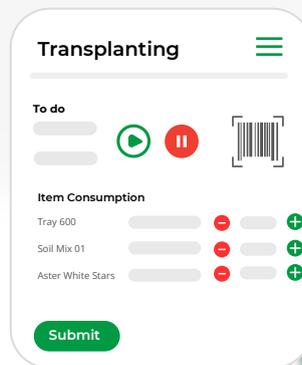

- 
Real-Time Tracking: Log scrap, inventory moves, or growth phases on the go. Manage sowing, planting, harvesting, or treatments — works even offline.
- 
Built for Your Role: Whether checking crops or shipping trees, every task is simpler. Pick, pack, and ship with digital orders and instant updates..
- 
Save Time, Reduce Mistakes: Snap photos of plant health, estimate yields, count with AI, or handle tasks wherever you are.

Agriware Apps

- 
Greenhouse App - Log activities, such as inventory movements, scrap, and growth phase changes
- 
Work App - Schedule activities and assign tasks to workers
- 
Inspect App - Register plant health and quality & improve scouting.
- 
Time App - Track workforce time and allocate labor cost
- 
Logistics App - Streamline shipping process, pick, pack and loading.

No more paperwork — just plan, register, and scout on your phone throughout the production cycle

“ We deliver more than just software — we provide expert guidance and process optimization

Agriware grows with input from top growers, **meaning you use software shaped by the best in the business.**

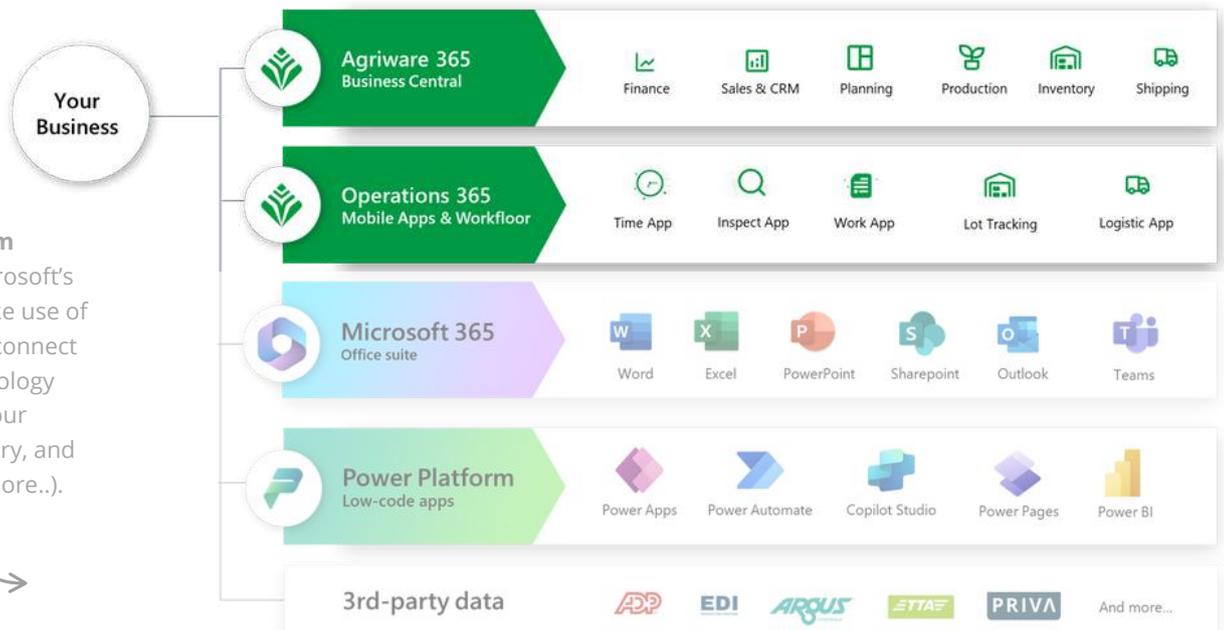

Build on Microsoft ERP

Microsoft Dynamics 365 is the leading ERP solution with robust core capabilities. Agriware tailors it specifically for greenhouse growers and producers.

Future Proof platform

Agriware, built on Microsoft's platform, lets you make use of ongoing innovations, connect with Microsoft's technology stack, and integrate your systems (EDI, machinery, and climate control, and more..).

Connect with Agriware

We take time to understand your operations. Get in touch to see the software and explore how we can support your workflow.
