

EPS CityZen

AI Driven Smart Parking Management Software

CityZen is an **AI-powered** parking management software that manages the entire parking process in real time. The system analyzes data from **ANPR cameras** and sensors, using AI to accurately identify vehicles and process parking events. With continuous analysis of parking habits, CityZen optimizes occupancy, predicts availability, and dynamically supports revenue growth. **Automated payments**, digital discount programs, and season pass management all contribute to a seamless user experience, while operators benefit from transparent and secure digital accounting. CityZen is more than just parking software – it is an intelligent, sustainable solution designed for **the cities of the future**.

- Shopping Malls and Retail Centers
- Hospitals and Clinics
- Airports and Railway Stations
