EASYALLOCK

EASY ALLOCK SYSTEM

Universal connector for winches, round bases, hexagonal and other profiles

The first tool that allows you to connect a winch with various accessories. This new expanded system perfectly adapts to where it is inserted, creating an ultra-solid connection between the structure and the accessory you want to attach.

Unlike traditional eight-point fittings, the expanded system eliminates play and ensures maximum stability.

In addition, it allows you to connect an eight-point star with a round section.
