TOUCH EKO

control panel

The TOUCH EKO is the latest generation digital wall control panel developed to minimize water and energy consumption.

Made of hi-tech tempered glass, with LED back lighting, the TOUCH EKO is extremely practical, equipped with sensors and intelligent functions to guarantee operational excellence and respect for the environment.

The upgraded control systems allow you to maximize the flushing efficiency and completely save water consumption: the user can manually select the water quantity and thanks to the SFT - Smart Flush Technology – when the flushing cycle starts, the pump activates and stops automatically based on the quantity of water detected. The new TOUCH EKO allows you to achieve the perfect balance of optimal sanitation and efficiency with a lower environmental impact (reduction in water consumption by 35% and reduction in energy consumption by 5%).

The minimal and stylish design adapts to the most demanding customers with a high aesthetic sense and respect for the sea.

Available in black or white glass and custom colors.

Features:

- Save water consumption (-35%)
- User-friendly
- Sustainable with reduced power consumption (-5%)
- Highend design
- Clever and simple
- IP55
