

SUPER ELITE MARINA SYSTEM

PRODUCT GUIDE

Product Highlights

Tried and proven high impact resistant commercial marina system

5-sided 50 MPA marine grade concrete structure with more concrete to areas where it is structurally required

Reinforcing mesh in concrete deck and wall provides longer overall design life

Pontoon base with fully welded PE base liner system

Designed with high freeboard to suit large vessel requirements as required

Allowance for heavy deck traffic and vehicle access

SL Grade polystyrene voids, 13.5 kg/m³ density

Reinforcing bar perimeter beam where required

Service conduits to accommodate electrical, water and fire services

Low/zero maintenance required

No timber or through bolts to constantly tighten

Custom rotomoulded polyethylene service pits to accommodate electrical, water and fire services.

Stainless steel fittings for all connections

Extruded aluminium water (6000 series) – Australian sourced

Smartly finished with a customised aluminium water that incorporates a unique press-in bump fender which eliminates the need for screws

Fabricated Bollards & 380mm vessel mooring cleats

This versatile connection allows for simple reconfigurations of the marina fingers without extensive design changes.

The Superior Super Elite Pontoon System is a trusted solution for commercial marinas and industrial applications. A simple yet extremely durable connection with our elastomeric hinge allows for the natural movement from wave action within the marina system and an easy connection to the Elite Pontoon System.
