

## V-feetRack

**V-feetRack is a wire rack with feet bent inwards, which helps prevent plants and trees in pots from being blown over by the wind.**

- V-feetRack consists of multiple pot sections, which ensures stability for multiple plants or trees.
- The inwards bent feet make sure that this rack is 100% safe to be used on ground cloth.
- The inwards bent feet also ensure an optimal width of the passageways.
- This model can be stacked very well, which results in stable pallets.
- V-feetRack is an easy-to-use model, which is easily positioned or stacked.
- The standard types are suitable for most 'tree container' pots.
- For other models or different pots we offer made to measure racks.
- Due to the high quality coating of V-feetRack, these racks are very resistant to aggressive or corrosive substances such as plant nutrition and artificial fertilizers.
- This protective layer, in a very high degree, prevents the zinc layer from losing zinc in the (recirculation)water.
- Upon request, this model can also be used as an internal means of transport with a forklift.
- V-feetRack is available in the standard types 3L, 4L, 5L, 7.5L, 10L, 12-15L and made to measure.
