

**VORTEK® systems
cartridges for JUMBO sizes**

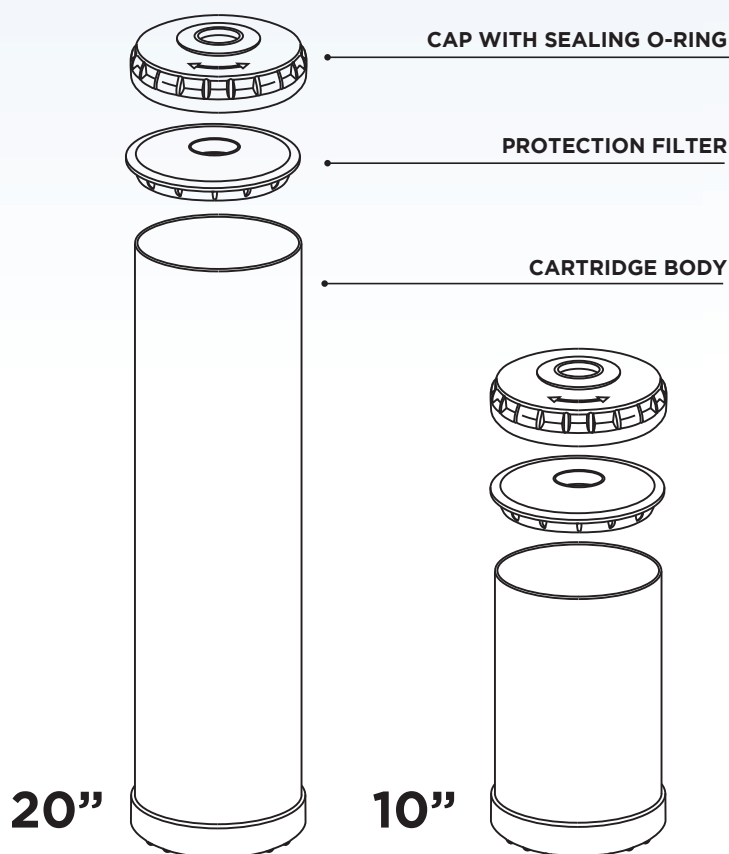

We are proud to introduce our NEWS on the market, the JUMBO 4"1/2 cartridges size, for granular media or resins, available in 10" and 20" height filter housings

VORTEK® by W.F. Srl is a NEWS as it defines a conceptual innovation, in the cartridge construction structures that optimize the treatment capacity performance of modern media like: NAC or TAC.

VORTEK® by W.F. Srl because of internal forced turbulence that allows a uniform distribution of the filter bed during the treatment flow;

thanks to that kind of enhancement of the flows we can improve inside, we switch next to the theoretical limits, the treatment capacity of the media.

W.F.
